Otto H. Gies, Managing Director

Dear Customer!

We prefer building new models and simulators with you. You, our customers came up with important suggestions for the development of our realistic and value-for-money reanimation simulator, "Basic Billy" on page 4, the sclerotherapy simulator on page 6, and the pathological models on pages 7 and 12.

We also get our inspiration however from new technologies, such as for instance, the Micro-CT based teaching models, spongy bone and auditory ossicles, on pages 8 and 9. Our enlargements of these small structures are totally true to the original.

The impetus for innovations may come from anywhere – there is a large number competent people who are working together to provide you with accurate, high-quality, and affordable materials. Let's strengthen the backbone of medicine together: training and advanced studies.

Yours sincerely,

Otto H. Gies

9 Reasons to Buy 3B Scientific® Products:

1 Three Year Quality Warranty

If you detect material or processing defects despite appropriate handling of a product within 3 years of the invoice date, we will replace the product or remedy the defect.

2 Global Price Guarantee

You will get high quality at low prices. If you obtain a comparable product of the same quality at a lower price from anywhere else on our planet within 14 days, we will take it back and refund the full purchase price.

3 No Risk Buying

If you are dissatisfied with a 3B Scientific® Product for whatever reason, simply return it to us within 14 days for a refund, packed in original cartons and with a copy of the invoice. No questions asked!

4 Prompt Delivery

Most products are shipped from stock. That means that we will generally ship the items you ordered within 2 - 10 days without incurring unreasonable freight or express charges.

5 Special Prices

If you place an order for large numbers of 3B Scientific® Products, you may be eligible for additional savings. Please ask for your special price offer.

6 Custom Orders

We are the world's leading manufacturer of anatomical models. If you have a suggestion for a new item, or require special labelling or packaging, we will do our best to accommodate you.

7 Environment Friendly Paints and Packaging

All models are painted accurately with solvent free paints. Packaging is included in the price and is made of reusable material containing no CFCs. Only special packaging will incur an extra charge.

8 Continuous Improvement

Continual design improvements and product research are carried out in order to ensure that you receive only the very best. As a result, products may differ slightly in form or colour from those depicted here.

9 DIN EN ISO 9001 Certification

The proven quality of our service, products and organisational procedures has been DIN EN ISO 9001:2008 certified since June 2000. This approved quality management system promotes our particular commitment to innovation, product improvement and customer orientation. In addition, since the Worlddidac Quality Charter was introduced in September 2004, we have reached all related quality standards.

Your BLS Simulator for Realistic Training

Basic Billy was developed using the results of a study on depth of force and compression during cardiopulmonary resuscitation. This enabled optimal force and compression values for adults and children to be determined statistically and then precisely implemented in the product design.

- Easy to use
- Realistic and Robust
- Adult and Child

NEW

Basic Life Support Simulator "Basic Billy"

Cardiovascular failure is one of the most common causes of death. The guidelines issued by the AHA (American Heart Association) and ERC (European Resuscitation Council) show that it is not all that difficult to provide help and save lives using the correct cardiac massage and ventilation technique. Of course, Basic Billy fulfils the latest guidelines from the AHA and ERC on cardiopulmonary resuscitation (CPR) and is therefore suitable both for medical training and for first aid training in schools, clubs and first aid courses. You benefit from the following features:

- Torso with shoulders and the necessary anatomical features for finding the ideal pressure point for cardiac massage
- Head with airways for mouth-to-mouth and mouth-to-nose resuscitation
- Head tilt to open the airways
- Mask ventilation is also possible
- Realistic amount of effort and realistic minimum depth of impression with acoustic feedback at 5cm (adult) or 4.5cm (child) using two easy to change springs
- Low priced disposable airways ensure hygienic use and easy care of the mannequin
- The high quality of materials and workmanship guarantee functionality and longevity even under high operational demands
- Developed and manufactured in Germany

Supplied with a transport box (22x61x31 cm³), 2 face masks, 50 disposable airways for adults and children, keycard with adult and child algorithm for the 2010 guidelines and disinfectant.

Simulator for Ultrasound Guided Sclerotherapy for Varicose Veins

The current literature indicates that ultrasound guided foam sclerotherapy can be extremely effective even when treating complicated varicose veins [1]. The procedure is minimally invasive, safe and cost-efficient. In order to achieve an optimal result and minimise complications, suitable qualifications are mandatory since the precise positioning of the needle in the desired vein requires good hand-eye coordination as well as expert knowledge and experience. This simulator enables students to cost efficiently acquire the preclinical skills for ultrasound-guided microfoam sclerotherapy for varicose veins. Angiologists, phlebotomists and vascular surgeons can practice under optimal conditions since this unique 3B Scientific® simulator:

- simulates the haptic properties of real soft tissue when performing palpations and giving injections
- has a realistic vena saphena
- shows a tissue like texture and echogenicity on realistic ultrasound images

Training with this simulator enables students to:

- develop their abilities in ultrasound guided sclerotherapy
- recognise the different levels in order to be able to safely perform ultrasound guided sclerotherapy
- considerably improve their skilfulness and hand-eye coordination under optimal conditions
- internalise initial experience in order to be able to perform ultrasound-guided sclerotherapy more quickly, including on patients

The prototype of this simulator was successfully publicly tested for the first time during the scientific session of the 16TH INTERNATIONAL CONGRESS OF THE INTERNATIONAL UNION OF PHLEBOLOGY in Monaco from 31st August to 4th September 2009 [2] and won great approval among the professional audience.

Ultrasound image of a needle point in the lumen of the simulated vessel, longitudinal presentation

Ultrasound image of the simulated vessel viewed longitudinally

Intramuscular Injection Simulator

This low cost simulator enables you to practice intramuscular injections realistically with fluid up to a puncture depth of 50mm. The highly durable plastic skin can be pierced many hundreds of times and can easily be replaced if required. The container can be emptied quickly and easily after several uses and the foam can be squeezed to enable repetitions at any time.

9985-1010008

9985-1010008

Gastric Band Model

The model was developed based on our existing two-part stomach model to which was added an SAGB Quick Close® gastric band. A gastric band is inserted surgically to treat morbid obesity if conservative treatments are unsuccessful. This model is highly suitable as a tool for explaining the device to patients.

From Micro to Macro

Micro CT based anatomical teaching model by 3B Scientific

For the very first time, high resolution micro-computer tomography has been used to produce exact, enlarged replicas of very tiny structures from micro-anatomical original preparations, such as cancellous bone and human auditory ossicles.

This process supersedes the evaluation of two dimensional histological sections, so that the three dimensional micro-architecture of the scanned object can be reproduced in a non-destructive way.

Once developed to analyze small defects in ceramic materials, the micro CT scanner now has a valuable use in medicine, in particular in research into osteoporosis.

It works in a similar way to a traditional CT scanner, but has a much higher resolution and a longer scan time.

The data reconstructed on the computer during the scanning process has then been used to create this unique teaching model.

Original CT Images

Cancellous Bone

The model shows the spongy bone inside the bone. Its filigree architecture is determined by influences such as pressure, bending and torsion. Using innovative micro CT technology, we have managed to reconstruct an exact three dimensional copy of a piece of cancellous bone from an original and enlarge it 100 times.

Ossicles – magnified 20 times

With incomparable accuracy, this three dimensional model shows the human auditory ossicles in their normal state, magnified 20 times. This is possible using a micro-CT that works in a similar way to a large medical computer tomograph. Originals, just a few millimeters in size, of the malleus, incus and stapes were inserted into this device and scanned to produce virtually wafer-thin, high-resolution layers. They were then reproduced three-dimensionally using computer technology. In this way, the micro-architecture can be reproduced without damaging the structures. The result is a fascinating view of the smallest bones in the human body (stapes) and their companions (incus and malleus).

9985-1013060

Infant Ostomy Trainer

The Infant Ostomy Trainer has been created to educate carers and parents on how to give special care to an infant with a stoma. This trainer will help by teaching step-by-step procedures for cleaning and caring for a baby's stoma and changing the pouching system. The anatomy of the colostomies were carefully reproduced to provide lifelike appearance and functions. A soft, pliable material is used for the stomas in order to achieve the most realistic tactile sensation. The syringes included are used to inject simulated stool through ports to the colostomy sites. Consistency of the simulated stool can be thinned by adding water. The colostomy sites can also be irrigated. The simulated stool may be reused. Trainer comes complete with one ostomy bag, a glove, two 3 cc syringes, 1 oz. jar of stool, 1 oz. jar of lubricant, wash bottle for irrigation, instruction manual, and a storage box.

9985-1013059

Infant Male and Female Catheterization Trainer

The Infant Male and Female Catheterization Trainer is an inexpensive 2-in-1 trainer that provides realistic practice of this difficult procedure.

- Practice insertion, position, catheter balloon inflation and deflation
- Feel resistance and pressure as with a real patient
- Urine flows when catheter is in proper position
- Practice both male and female infant catheterization training
- Anatomically realistic with both male and female genitals
- Genitals made of soft, lifelike material
- Replaceable male and female genitals
- Lower half of infant only

Includes: infant manikin, one male and one female genital insert, 2 oz. lubricant, infant Foley catheter, and instruction manual.

9985-1013060

Elderly Pressure Ulcer Foot

Chronic foot ulcers affect the elderly the most, we have designed the Elderly Pressure Ulcer Foot for instruction on care and cleaning of pressure ulcers in various stages. Pressure ulcers are more likely to appear over pressure points such as heels, tips of toes, between toes, or anywhere the bones may protrude and rub against socks, shoes, or bed sheets. This replica contains all four severity stages:

- Stage 1 – Located on the bottom of the toe. Surface of the skin is red.
- Stage 2 – Located on the bottom of the foot just under the toe. Surface of the skin is red and deeper into the skin layers.
- Stage 3 – Located on the side of the foot. Surface of the skin is red, looks more like a crater, and reaches the bottom layer of the skin.
- Stage 4 – Located on the heel of the foot. Surface of the skin is red. A great amount of tissue has been damaged, including muscle, bone, joints, and tendons. The Elderly Pressure Ulcer Foot includes a foot and information key card.

24x10 cm

9985-1013058

9985-1013057

Diabetic Injection Pad

This pad looks and feels like human skin; ideal for diabetic instruction and injection practice. May be worn on the body in specific locations (stomach, thigh, upper arm) so patients can practice injections. Thick enough to accept all insulin needles. For safety purposes, there is a hard plastic backing to prevent the needle from poking through the pad and into the wearer's skin. 4-1/4" x 6-1/4" oval pad with hard plastic backing and 1" wide nylon strap with adjustable plastic buckle. Needles not included. 10x16 cm, 0.6kg

9985-1013057

Injection Belly

This soft stomach replica will be an invaluable tool for teaching patients how to properly insert and rotate the infusion set for insulin pumps, avoiding the 2" (5 cm) area around the navel, as well as giving self-injections. The replica has lifelike skin with what feels like real stomach tissue underneath. There is a soft plastic backing to keep needles from going through and holes to allow the material to breathe and dry, should you choose to inject liquids. Distilled water may be injected, but the more liquid that is injected into the simulator, the longer the time for evaporation. The injection belly is considered disposable, however, with proper care and treatment it will serve its purpose for a long period of time. Using the smallest needles possible when simulating injections and rotating the insertion points will help prolong the life of the replica. Infusion set and needle not included.

Prepared Microscope Slides "Made in Germany"

LIEDER Premium prepared MICROSCOPE SLIDES are made in our German laboratories under rigorous scientific control. They are the product of long experience combined with the most up to date techniques. The prerequisite for excellent preparations is good material, well preserved and fixed so that the finer structures are retained in as life-like a way as possible. Microtome sections are cut from this material by our highly skilled and experienced staff. They are of a thickness which will finally result in slides from which the maximum resolution of the structural components can be obtained. Particular attention is paid to the staining technique and in each case the selected method for a particular specimen will ensure the best possible differentiation combined with clear definition and permanency of staining. LIEDER prepared microscope slides are delivered on best glasses with fine ground edges of the size 26x76 mm (1x3") and are mailed in solid boxes. We reserve the right to make minor alterations to the sets and compilations.

All sets are furnished with illustrated explanatory brochures (manuals).

3B Scientific® Skeletons – Value for Money

When choosing a skeleton model, you are bound to find considerable differences with regard to quality and price. A cheap skeleton may seem appealing to your budget, but does it also offer you reliable quality and attention to anatomical detail? Is it free of chemicals to ensure that you and your pupils, students, staff or patients are not subjected to any hazardous substances? Will it serve you well for many, many years or will you need to buy a replacement after only a few months?

Before making your purchase decision, please consider the following points:

- All 200+ bones are represented, even the hyoid and the styloid process
- A natural cast with true to original surface structure
- The arms and legs can be easily removed and reattached
- The skull can be disassembled and reassembled with ease
- Includes all subcranial openings
- The eye sockets are naturally shaped and the optic canal is portrayed
- The cartilage of the ribcage is hard wearing and robust
- The ribcage is assembled robustly and will not collapse in itself
- The materials used are high quality and durable
- All metal parts are made of stainless steel
- The model is safe and toxicologically harmless

Our range of true-to-original 3B Scientific® skeletons made of unbreakable plastic fulfils all of these demands. We grant you a three year warranty for that and the promise that every one of our skeletons is a high quality product with an outstanding price performance ratio. 3B Scientific not only promises quality on paper, but has made it the measure of all actions – ISO 9001:2008 certified and tested by independent auditors.

Classic Skeleton Stan, on 5-foot Roller Stand

This classic model (we call him Stan) has been the standard of quality in hospitals, schools, universities, and laboratories for over 50 years. Choose from 5 models to suit your individual preference – of course each one has all standard benefits of a 3B Scientific® skeleton.

All 5-leg roller stands have brakes

The Standard Benefits of a 3B Scientific® Skeleton:

- Excellent value for money
- 3-year warranty
- First-class natural cast “Made in Germany”
- Manual final assembly
- Made of durable, unbreakable plastic
- Almost natural weight for the approx. 200 bones
- Life-size
- 3-part mounted skull
- Limbs are quick and easy to remove
- Stand and transparent dust cover included
- All 5-leg roller stands have brakes

Details of the additional features of each individual model is provided in the product descriptions.

All 5-leg roller stands have brakes

9985-1000029

Classic Skeleton Max, on 5-foot Roller Stand with Brake

This version contains all standard benefits of a 3B Scientific® skeleton but additionally offers representations of the structural interaction between bones and muscles. It depicts over 600 structures of medical / anatomical significance including muscle origins (red) and insertions (blue) on the left side as well as hand-numbered bones, fissures and foramina on the right side.

9985-100033

Sam Deluxe Skeleton, on 5-foot roller stand with brake

Of course this top-of-the-range version contains all the benefits you have come to expect in our high quality 3B Scientific® standard skeletons. Sam additionally allows you to demonstrate the movements of the skull and head joints as well as all natural human postures due to the fully flexible vertebral column. The unique combination of flexible vertebral column, muscle origins and insertions, numbered bones, flexible joint ligaments and a disc prolapse between the 3rd and 4th lumbar vertebrae display over 600 structures of medical /anatomical interest in this top model.

To sum it up:

- All standard benefits of a 3B Scientific® Skeleton (see page 17)
- Over 600 hand-numbered and identified details
- Hand-painted muscle origins and insertions
- Flexible joint ligaments
- Flexible vertebral column
- Emerging spinal nerves and vertebral arteries
- Disc prolapse between L3 and L4

Anatomy

Fred Deluxe Skeleton, on 5-foot roller stand with brake

Introducing Fred the flexible skeleton. Fred's spine can bend to mimic any natural human movement. Once flexed, it will remain fixed in position to demonstrate correct and incorrect posture or various pathological conditions. In addition, all skull and neck movements can be demonstrated. Spinal nerve exits and vertebral arteries are shown as is a dorso-lateral disc prolapse between the 3rd and 4th lumbar vertebrae. Of course Fred also provides all standard benefits of a 3B Scientific® skeleton (see page 17). 170 cm; 8.0 kg

9985-1000035

Fred Deluxe Skeleton (1 hand and 1 foot flexible), on 5-foot roller stand with brake (not shown)

Same as 9985-1000035, in addition 1 hand and 1 foot are flexibly mounted.

9985-1000036

Physiological Skeleton Phil, on hanging roller stand with brake

This skeleton is unique in its nearly life like representation of the joint mechanisms. It allows you to demonstrate the inward and outward rotation of the arms and legs and the extension and flexion of the knee and elbow joints. The flexible spine allows for natural movement (lateral inclination, movement and extension, rotation). The bones of the hands are mounted on wire to demonstrate their natural positions. The foot bones are mounted flexibly to enable movement. The shoulder blades rotate when the arms are raised. Even the restricted mobility of the iliosacral joint and the sacrococcygeal joint can be demonstrated. Of course Phil has all the standard benefits of a 3B Scientific® skeleton

186 cm; 8.5 kg

9985-1000037

Functional Skeleton Model "Frank", flexible, on hanging roller stand with brake

As 9985-1000037, however with all large joints flexibly mounted. Developed with the assistance of John Chester M.D. (advisor to the Feldenkrais Guild N.A.), this unique model allows you to perform individual movements in a nearly lifelike way. You can even demonstrate the complex motions of the upper extremity with this functional human skeleton. A great help in clearly demonstrating the Feldenkrais methods!

9985-1000038

Physical Therapy Skeleton

- Removable skullcap for studies of the internal skull base
- Breakaway maxilla revealing paranasal sinuses
- Spring mounted, detachable mandible
- Skeleton disarticulates into 8 pieces (both arms and legs, 4-part skull)
- Hand-painted and hand lettered muscle origins (red) and insertions (blue)
- Left hip removable
- With brachial plexus
- Flexible vertebral column
- One knee demonstrates "bucket handle" deformity
- Muscles of mastication for TMJ demonstration
- Normal heart and lobar lung
- Supplied with deluxe stand

9985-1000039

Mini Skeleton “Shorty”, mounted on a base

Top of the range mini skeleton. Skillful 3B engineers using powerful hardware and software optimized the process of reproducing miniatures in order to keep all anatomical details and structures even at half natural size (80 cm). The skull can be removed and disassembled into three parts (skull-cap, base of skull, mandible) and the arms and legs are removable. The hip joints are specially mounted so their natural rotation can be demonstrated. 88 cm; 1.5 kg

9985-1000039

Mini Skeleton “Shorty”, on hanging stand (not shown)

This model is the same as the 9985-1000039 Mini Skeleton, but with a hanging stand. The stand can be either placed on the floor or attached to a wall.

94 cm; 1.7 kg

9985-1000040

9985-1000045

Mini Skeleton “Shorty” with Painted Muscles, on base (not shown)

Hyoid bone on stand

9985-1000143

9985-1000143

3B MICROanatomy™ Bone Structure

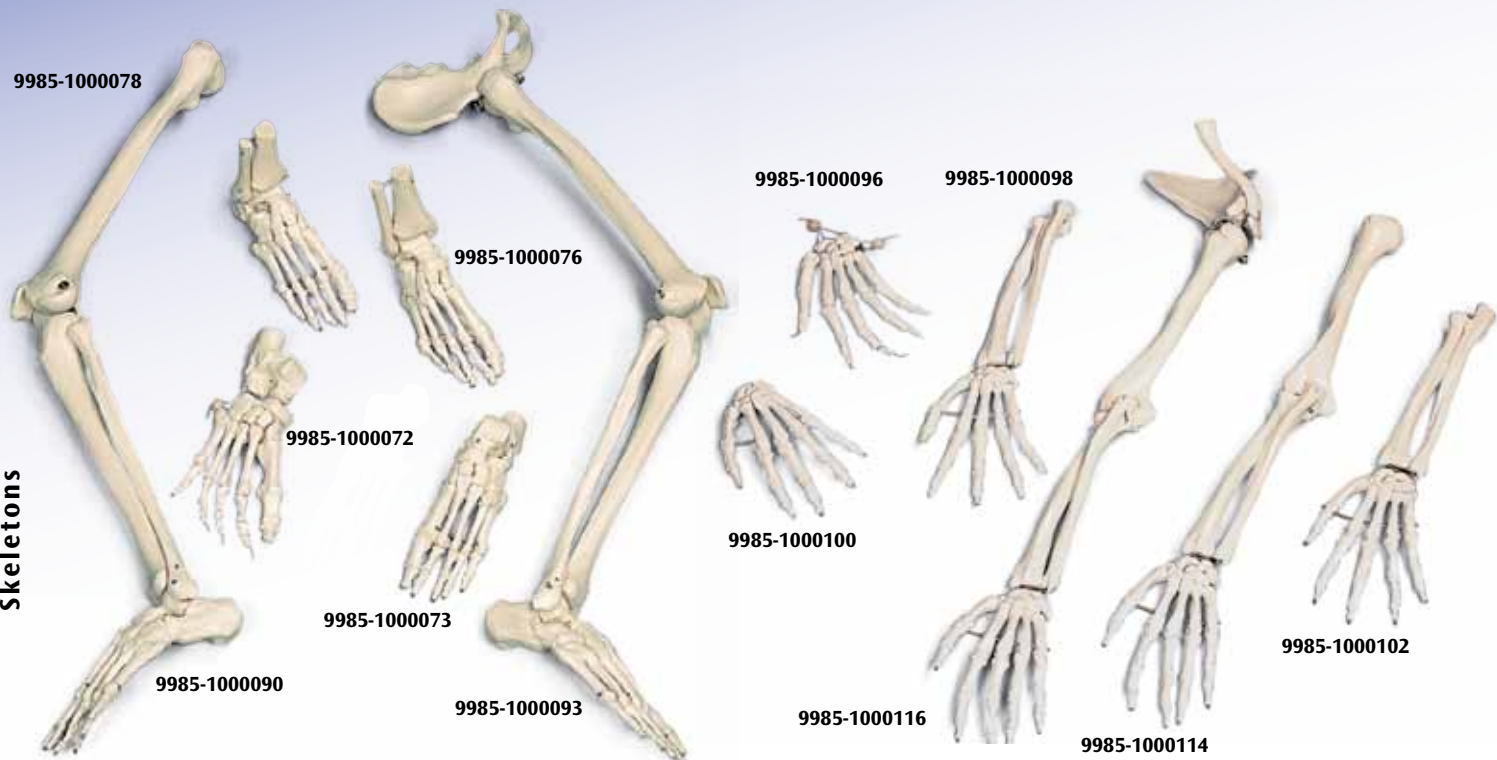

This extremely detailed model depicts a three dimensional section of a lamellar bone, showing the typical structure of a tubular bone enlarged 80 times. Various planes are shown in cross and longitudinal section through all levels of the bone, as well as a 2-plane section through the inner structure of the bone marrow. The typical elements of a lamellar bone are easily identified and help to understand its structure and function with the characteristic osteons, also referred to as Haversian systems. This model gives a clear illustration of the interplay of the individual components, such as spongy and compact substance, endosteum, cortical substance, osteocytes, Volkmann and Haversian canals. Supplied on base. 26x19x14.5 cm; 0.8 kg

Hand Skeleton Model with Ligaments and Muscles

The bones, muscles, tendons, ligaments, nerves, arteries, and veins are all featured in this high quality 4 part model of the hand and lower forearm. The dorsal side shows the extensor muscles as well as portions of the tendons at the wrist as they pass under the extensor retinaculum. The palmar face of the hand is represented in three layers, the first two removable to allow detailed study of the deeper anatomical layer. In addition clinically important structures such as the median nerve and superficial palmar arterial arch can be examined in detail. The deepest anatomical layer allows for study of the intrinsic muscles and deep palmar arterial arch in addition to other details.

33x12x12 cm, 0,4 kg

9985-1000358

Hand Skeleton Model with Ligaments and Carpal Tunnel

This 3 part hand model shows the anatomical details of the ligaments and tendons found in the hand, wrist, and lower forearm. The interosseous membrane between the radius and ulna is shown along with the bones of the hand. The flexor retinaculum is removable and in addition there is a removable portion that can be fitted onto the back of the model. This portion features the clinically important structures of the carpal tunnel such as the flexor retinaculum, median nerve, and tendons.

9985-1002391

9985-1000359

Foot Skeleton Model with Ligaments

This detailed model displays numerous important ligaments and tendons including the achilles and peroneus longus tendons of the ankle. The model consists of the bones of the foot and lower portions of the tibia and fibula, including the introsseous membrane found between them. All the anatomically important ligaments and tendons are shown.

23x18x30 cm, 0.6 kg
 L/D/E/F/I/S/P/J/R/C www.

9985-1000359

Foot Skeleton Model with Ligaments and Muscles

This model is the best of its kind for quality and value. This anatomically detailed model of the foot and lower leg can be disassembled into 6 removable parts for detailed study. The model features not only the bones but also muscles, tendons, ligaments, nerves, arteries, and veins. The frontal view features the extensor muscles of the lower leg. The tendons can be followed on their passage under the transverse and crucial crural ligaments all the way to their insertion points. In addition all tendon sheaths are visible. On the dorsal portion of the model the gastrocnemius muscle is removable to reveal deeper anatomical elements. The sole of the foot is represented in three layers; the first layer displaying the flexor digitorum brevis. This muscle can be removed revealing the quadratus plantae, the tendon of the flexor digitorum longus, and the flexor hallucis muscle. This second layer is in turn removable to display even deeper anatomical details.

Deluxe Demonstration Skull, 10-part

This replica of the human skull is of an exceptional quality. The skullcap is removable and the base of skull is mid-sagittally divided. The frontal sinus, perpendicular lamina and vomer are fitted with flaps which can be opened to view the lateral nose wall and sphenoidal sinus. On the left half, the temporal bone can be removed and folded up in the area of the tympanic membrane. Maxilla and mandible are opened to reveal the alveolar nerves. On the right side the temporal bone is opened to reveal the sigmoid sinus, the facial nerve canal and the semicircular ducts. Additional flaps are located at the maxillary sinus and the right half of the mandible, so that the dental roots of the premolars and molars of the lower jaw can also be viewed. The natural occlusion and the individual removal and replacement of each tooth also make this skull especially interesting for dentists. 28x22.5x18.5 cm; 1.5 kg

9985-1000059

Didactic Skull on Cervical Spine, 4-part

This model uses 19 didactic colours to demonstrate the shapes and relationships of the various bone plates of the skull. Flexibly mounted on the cervical spine (C1, C2 and C7 are coloured), this model also shows the hind-brain, spinal cord, spinal nerves of the cervical spine, vertebral arteries, basilar artery and rear cerebral arteries. Mounted on a stand. 18x18x30 cm; 1.4 kg

3B Scientific® Beauchene Skull, 22-part, Didactic Coloured Version

This high quality natural cast made of durable, dimensionally stable plastic reveals the complex structure of the human skull in an exceptionally clear way. The 22 individual bones can be firmly and precisely assembled at the well defined skull sutures using robust inconspicuous connectors. This means that the skull can be handled without falling apart, which differentiates it from alternative wobbly models with magnetic connectors. The perfectly interlocked sutures illustrate the adhesion of a genuine human skull very realistically. The bones are didactically dyed in nine lasting colours for ease of identifying the various skull sections. Pairs of bone plates are the same colour.

The skull consists of the following individual bones:

- Parietal bone (left and right)
- Occipital bone
- Frontal bone
- Temporal bone (left and right)
- Sphenoid bone
- Ethmoid bone
- Vomer bone
- Zygomatic bone (left and right)
- Upper jaw (maxilla) with teeth (left and right)
- Palatine bone (left and right)
- Nasal concha (left and right)
- Lacrimal bone (left and right)
- Nasal bone (left and right)
- Lower jaw (mandible) with teeth

This popular model is produced using accurate casts of the individual bones of a genuine "exploded" skull of European origin and is ideally suited for training osteopaths as well as other professionals.

21x14x16 cm; 0.7 kg

9985-1000041

Anatomy

Unique Worldwide

The starting point for our absolutely realistic 3B Scientific® Systematic Skull was the accurate cast of a perfect original. Specialised production processes and materials guarantee the precise replication of even the minutest anatomical structures. 3B BONElike™ bones look real, feel absolutely natural and weigh the same as natural bones. If you want the world's best skull, our 3B BONElike™ models are just the thing for you! (Please also read the endorsements for 3B BONElike™ bones on page 33.)

9985-1000064

3B BONElike™ System Skull – Didactic Deluxe Skull, 7-part

This unique and high quality model will leave no questions in the study of skull anatomy unanswered! The ability to transfer the structures visible on the transparent half to the bony half give this skull a special didactic value. On the right, transparent skull half the paranasal sinuses can be easily located even from the outside, since these are marked in different colours: maxillary sinus (yellow), ethmoidal cells (orange), frontal sinus (green), sphenoidal sinus (purple). The cranial sinuses and the neck and face arteries are also shown in colour: sinuses of dura mater (blue), common carotid artery, external and internal carotid artery and the branches of the meningeal artery (red). One brain half, which is also visible through the skullcap, allows visualization of the position of the brain and the course of the sinuses. The periodontal pockets and tooth roots can be seen through the transparent jaw. The lower jaw is mounted flexibly to demonstrate the masticator movements. The skull is mounted on a cervical spine and can be disassembled into both halves of the skullcap, the left half of the base of skull, the nasal septum, the complete mandible and a brain half.

35x18x18 cm; 1.0 kg

9985-1000062

9985-1000062

3B BONElike™ System Skull – Combined Transparent / Bony Skull, 8-part

By combining one transparent and one bony skull half this is the first model to allow teachers of anatomy a topographical juxtaposition of the structures that cannot be seen in other skull versions. The right, transparent skull half allows the study of important anatomical details, such as the location of the paranasal sinuses. Therefore, in combination with the left, bony skull half, a direct transfer of the otherwise invisible structures becomes easy and uncomplicated. The transparency of the jaw allows an exceptional view onto the periodontal pockets and roots. The teeth are removable for detailed studies. In addition, the external masticator muscles (masseter and temporal muscles) are represented on the bony skull half. To demonstrate masticator movement, the lower jaw is mounted flexibly. These features also make the skull especially useful for dentists. The skull can be disassembled into both halves of the skullcap and base of skull, the nasal septum, the complete mandible and both masticator muscles.

16x14x21 cm; 0.54 kg

Pelvic Skeleton, female

See A61 on page 37.

9985-1000121

3B BONElike™ Vertebrae

Cast from natural bone human vertebrae giving precise replication of even the finest anatomical details.

- Feels and looks like real bones.
- Realistic weight.
- Excellent real bone substitutes for medical teaching and patient consultation.
- Each vertebra is marked for identification (C1-7, T1-12 and L1-5).

3B BONElike™ Vertebral Column

Flexible, mounted, true to life model of the human vertebral column in excellent BONElike™ quality with exact reproduction of all anatomical details, based on real weight. Consists of the male pelvis and occipital bone. Occipital bone and atlas can be detached individually. Without stand, see 9985-1000132, page 32. 85 cm; 1.5 kg

9985-1000157

Set of 24 BONElike™ Vertebrae

This set includes the 7 cervical, 12 thoracic and 5 lumbar vertebrae. Each vertebra is labeled for identification purposes (C1-7, T1-12 and L1-5). Supplied in a transport and storage case with individual compartments for all 24 vertebrae. 41x40x12 cm; 2.4 kg

9985-1000156

Vertebral Column

9985-1000156

3B BONElike™ Human Child Vertebral Column

This true to life model of the vertebral column of a child of about 5 years old is particularly interesting for those working in anatomy, paediatrics, orthopaedics and paediatric radiology. The unique material of the model makes it almost indistinguishable visually from a real vertebral column. This flexible, movable vertebral column including occipital bone, pelvis and sacrococcyx is mounted on a stand. Within the spinal canal, the spinal cord with cauda equina and exiting nerve roots are represented with flexible material. This model is particularly useful for studying the phase of bone growth characteristic for the developmental stage of a 5 year old. This includes:

- Vertebrae – still partially incomplete development of vertebral bodies and vertebral arches.
- Sacrum – as yet incomplete fusion of individual sacral vertebrae. This commences at around the age of 15.
- Pelvis – still open Y cartilage as main growth plate of the acetabulum. The hip, pubic and ischial bone parts are not yet connected (didactically fixed with brackets in the model). These fuse around the age of 14-16.

14x9x51cm; 0,5 kg

9985-1000118

“It is a unique reproduction of a bone that cannot be distinguished from a real one. One of my staff members, a world renowned bone specialist, was not able to distinguish the vertebra from a real one. I wish your company much success with your excellent artificial preparations.” (Prof. Dr. Dr. h.c. Horst Erich König, Director of the Institute for Anatomy at the University of Veterinary Medicine, Vienna)

“In the first moment, I actually believed it was real bone! My compliments, the material has excellent tactile feel.” (Dr. med. Yvonne Kammerer, Institute of Anatomy of the University of Regensburg, Germany)

I am convinced that you have developed the best bone ever created by man.” (Professor Vladimir Ovcharov, MD, DSc Rector of Medical University – Sofia)

Cervical Spinal Column

Consisting of, occipital plate, the 7 cervical vertebrae with intervertebral discs, cervical nerves, vertebral arteries and spinal cord. On flexible stand. 19 cm; 0.3 kg

9985-1000144

Thoracic Spinal Column

Consisting of the 12 thoracic vertebrae with intervertebral discs, thoracic nerves and spinal cord. On flexible stand. 32 cm; 0.5 kg

9985-1000145

Lumbar Spinal Column

Consisting of the 5 lumbar vertebrae with intervertebral discs, sacrum with flap, coccyx, spinal nerves and dura mater of spinal cord. On flexible stand. 34 cm; 0.6 kg

9985-1000146

Atlas and Axis, with Occipital Plate

Assembled, on removable stand.

UNIQUE!

Spinal disorders

9985-1000182

Osteoporosis Model

Impressive didactic model for comparing osteoporotic and normal thoracic vertebrae. Ideal for medical studies and patient education. The 11th and 12th thoracic vertebrae are shown. Reproductions of sequential osteoporotic thoracic vertebrae with narrower intervertebral disc are located on the left of the stand. The upper vertebra is divided in the middle. The magnetically attached vertebral half can be removed easily to show the cut surfaces. This allows clear visualisation of the fractured upper part of the vertebral body caused by sintering, i.e. collapse of the bony substance in the course and as a result of osteoporosis. Degenerative changes in the bone, manifested as osteophytes, are also identifiable. For comparison, reproductions of two corresponding healthy vertebrae with intervertebral disc are provided on the right side. One half of the upper vertebral body is also magnetically attached and can be removed. Each set of vertebrae also has a sticker on the stand showing two 3D micro CT images obtained from bone biopsies. These illustrate the microarchitecture of the osteoporotic bone, which has a lower bone density compared to healthy bone.

14x9x10 cm; 0.2 kg
 L/D/E/F/I/S/P/J/R/C www.

9985-1000182

Herniated Disc Simulator

This innovative model shows the injured mechanism of a herniated disc. The simulator demonstrates how the intervertebral disc prolapses when flexing the vertebrae, reproducing what happens in real life when we bend or twist our trunk. Since vertebral disorders are widespread, therapists should have this model to make people aware of the importance of gentle movements and behaviours for the spinal column. This model will be of great assistance in medicine, physiotherapy, medical surgeries and clinics, moving and handling, ergonomics, physical education and other fields. The model consists of two vertebrae with an elastic intervertebral disc, spinal cord and nerves.

Size: 12x11.5x9 cm; weight 0.6 kg

9985-1005326

9985-1005326

9985-1005866

4-Stage Degenerative Lumbar Set

An exceptional model demonstrating bone and disc degeneration. The vertebrae pairs (L4, L5) demonstrate from left to right: a normal disc and bone; Facet Syndrome and a herniated disc; thinning disc and the beginning of bone spurring; a seriously degenerated disc with bone fusing.

Mounted on base.

The High-Quality 3B Scientific® Joint Collection

This unique series is designed to allow clear understanding of the functional movement and anatomy of large joints. A “preparative” demonstration of topographical anatomy from the surface to the joint leaves a lasting impression through dismantling and re-joining of the muscles which are involved in joint movement. This means a lot of anatomy for relatively low cost!

9985-1000176

Shoulder Joint with Rotator Cuff, 5-part

This model comprises the upper half of the humerus, the clavicle and the shoulder blade. The muscles of the rotator cuff are displayed and the sites of origin and insertion of the shoulder muscles are highlighted in colour (origin = red; insertion = blue). By removing the individual muscles, all movements of the shoulder joint can be performed. Mounted on a stand. 18x18x24 cm; 0.85 kg

L/E/D/S/F/P/I/J [www.](http://www.3bscientific.com)

9985-1000176

Hip Joint, 7 part

The model shows the right hip joint of a male with the individual muscles as well as the muscle origins and insertions on the femur and the hip bone. For educational purposes, the origin and insertion areas of the muscles have been raised and presented in colour (muscle origin = red; muscle insertion = blue). The hip muscles have been mounted on their corresponding regions of origin and insertion and are thus removable. 18x32x18 cm; 1.5 kg

L/E/D/S/F/P/I/J/R/C [www.](http://www.3bscientific.com)

9985-1000177

9985-1000177

9985-1000179

Elbow Joint, 8-part

This model shows the right elbow of a male with individual muscles and the muscular origins and insertions on humerus, radius and ulna. For didactic reasons, the areas of the muscular origins and insertions are raised and colour coded (origin = red, insertion = blue). The muscles can be attached to and removed from the corresponding areas of origin and insertion. 25x41x25 cm; 1.2 kg

E/D/S/F/P/I/J [www.](http://www.3bscientific.com)

9985-1000179

Knee Joint, 12-part

Completing our set of joints and their muscles, we are proud to introduce this 12-part knee model. It shows different removable muscles and muscle portions of the knee area. Colour coded and raised areas indicate the muscle origin and insertion points on the femur, tibia, and fibula. In addition parts of the fibular and tibial collateral ligaments are represented. All the muscles of the leg are easily removable to permit study of the deeper anatomical layers. 33x17x17 cm; 0,9 kg

L/D/E/F/I/S/P/J/R/C [www.](http://www.3bscientific.com)

9985-1000178

9985-1000178

9985-1000175

Femoral Fracture and Hip Osteoarthritis

This model was developed to provide patients with understandable information, e.g. before surgery. It shows the right hip joint of an elderly person in half natural size. In addition, a frontal section through the femoral neck is shown in relief on the base. The model shows the femoral fractures that occur most commonly as well as typical wear and tear symptoms of the hip joint. The following fractures are shown: medial femoral neck fracture, lateral femoral neck fracture, fracture through the trochanteric region, fracture below the trochanters, femoral shaft fracture, femoral head fracture, fracture of the greater trochanter, fracture or avulsion of the lesser trochanter. Mounted on base. 14x10x22 cm; 0.3 kg

E/D/S/F/P/J [www.](http://www.3bscientific.com)

9985-1000175

9985-1000003

Sports Shoulder

Includes upper half of humerus, clavicle and scapula. Articulated to show normal movement. Depicts the following:

- M. supraspinatus
- Long head tendon
- Glenoid labrum
- Rotator cuff

Stand included. 23x17x12 cm; 0.4 kg

E

9985-1000003

9985-1002390

Deluxe Knee

Distal half of femur attached to tibia, fibula and patella. Depicts all major muscles of the knee. Cruciate/collateral ligaments simulated with triple springs. Simulated "Bucket Handle" tear in medial meniscus. Patellar tendon simulated. Stand included.

33x12x12 cm; 0.7 kg

E

9985-1002390

9985-1000180

Sectional Knee Joint Model, 3-part

This model can be used to demonstrate various disorders of the human knee joint and their respective therapies in a graphic way. The model shows a natural sized, healthy right knee joint in upright position, including parts of the femur, tibia and fibula as well as the ligament system and the patella with part of the femoral tendon. The patella and attached tendon and the front half of the model (which is frontally sectioned) can be detached. Mounted on base.

12x12x24 cm; 0.5 kg

3B Scientific® Joint Series

These functional models provide an accurate demonstration of the anatomy and mechanics of the major joints, allowing better doctor-patient or teacher-student understanding. Use these life size and fully flexible joints to demonstrate abduction, anteversion, retroversion, internal/external rotation and much more. Mounted on a stand.

BESTSELLER

Joints

Functional Shoulder Joint

Consists of shoulder blade, collar bone, portion of humerus and joint ligaments.
16x12x20 cm; 0.35 kg

9985-1000159

Functional Hip Joint

Consists of portion of femur, hip bone and joint ligaments.
17x12x33 cm; 0.55 kg

9985-1000161

Functional Knee Joint

Consists of portion of femur, tibia and portion of fibula; also includes meniscus, patella with quadriceps tendon and joint ligaments.
12x12x34 cm; 0.4 kg

9985-1000163

Functional Elbow Joint

Consists of portion of humerus, complete ulna and radius as well as joint ligaments.
12x12x39 cm; 0.5 kg

9985-1000165

Deluxe Functional Shoulder Joint Model

Consists of shoulder blade, collar bone and upper arm stump.
Mounted on a base. 22 cm; 0.41 kg

9985-1000160

Deluxe Functional Hip Joint Model

Consists of thigh stump and hip bone. Mounted on a base.
32 cm; 0.56 kg

9985-1000162

3B Scientific® Deluxe Functional Joint Models

These high quality functional models of a lifesized right joint with ligaments shows the anatomy and natural physiological movements (e.g. abductions, anteversion, retroversion, internal and external rotation) in exceptional detail. The colour of the natural cast bones is extremely realistic. The cartilage on the joint surfaces is marked in blue. Mounted on a base.

L/E/D/S/F/P/I/J

Deluxe Functional Knee Joint Model

Consists of thigh stump, shinbone stump and calf bone stump, menisci and patella. Mounted on a base.
32 cm; 0.55 kg

9985-1000164

Deluxe Functional Elbow Joint Model

Consists of a stump of the upper arm, ulna and radius. Mounted on a base. 33 cm; 0.285 kg

9985-1000166

3B Scientific® Mini Joint Series

Following in the footsteps of their successful larger brothers, these mini-joints have been reduced to a half their natural size but have kept all of their functionality. In addition to the external anatomical structures, using the superb new joint cross-sections mounted on base, the medical or teaching professional now has the ability to explain what is happening "within".

Also available without base:

Mini Hip Joint

BESTSELLER

Dual Sex Muscle Figure, 45-part

The finest teaching tool available! Standing over 138 cm tall, this 3/4 life size human replica depicts deep and superficial musculature in addition to the body's major nerves, vessels, tissues and organs in exquisite detail. The internal organs are removable (45 pieces in all) to reveal the fundamental inter-relationships of human morphology. Remove the calvarium to view the 3-part removable brain. Look beneath the liver to reveal the gall bladder and bile duct. Peer inside the appendix, stomach lungs, heart or kidney. Remove and view the details of 13 different muscles of the arms and legs. This dual sex version has interchangeable genital inserts and a female mammary gland as well as a detailed multilingual key card identifying the hand numbered structures. Over 600 hand numbered and identified structures. Hand painted in realistic colours and mounted on a convenient roller base. Includes the following features:

- 5 arm/shoulder muscles
- 8 leg/hip muscles
- 2-part removable heart
- 5-part head including removable brain
- 2-part removable lungs
- 2-part stomach
- Removable 4-part male and 2-part female genital inserts
- Detachable arms, leg, head, and abdominal wall for detailed study

138x50x32 cm; 12.4 kg

 L/D/E/F/S/P/I/J [www.](http://www.3BScientific.com)

9985-1000206

Female Muscle Figure, 23-part

This female muscle figure without internal organs, brain and male genital inserts provides the same quality characteristics as the model 9985-1000206. This model consists of 23 parts, including 13 arm/leg muscles. Remove the calvarium to view the 3-part removable brain. Hand painted in realistic colours and mounted on a convenient roller base, there is simply no finer reproduction available! Includes the following features:

- 5 arm/shoulder muscles
- 8 leg/hip muscles
- Detachable arms, leg, head and abdominal wall for detailed study

138x45x32 cm; 11.2 kg

Complete Dual Sex Muscular Figure, with internal organs, 33-part

The whole human anatomy in a convenient size. This 84 cm high version of our deluxe muscle figure is a perfect choice for thorough demonstrations of human musculature and internal organs where space is an issue.

Exquisitely hand detailed and complete with 33 removable and/or dissectible parts, this version represents fine quality at a more affordable price. Painted by hand in realistic colours, this model comes complete with stand and detailed multilingual product manual.

It includes the following features:

- 5 arm/shoulder muscles
- 8 leg/hip muscles
- 2-part removable heart
- 2-part removable brain
- 2 Removable lungs
- Removable 2-part male and 2-part female genital inserts
- Detachable arm and abdominal wall for detailed study
- Almost 400 hand numbered and identified structures

9985-1000212

3B Scientific® Life-Size Dual Sex European Muscular Figure, 39-part

This life-size, high quality model represents a wide variety of human anatomical structures in accurate detail. It is therefore especially suitable for the high demands of medical school. The right half shows the skin, the left half the superficial and more profound muscles with nerves, vessels and bony structures. The versatility of this model, which is also aesthetically designed, is rounded off by the accurate representation of the internal organs. Its components are:

- 2-part head
- Brain half
- Sternocleidomastoideus muscle
- 6-part muscle arm (detachable: deltoid muscle, biceps muscle of arm, triceps muscle of arm, long palmar muscle with radial flexor muscle of wrist, brachioradial muscle with radial extensor muscle of wrist)
- 5-part upper leg (detachable: sartorius muscle, gluteus maximus muscle, rectus femoris muscle, long head of biceps femoris muscle with semi-tendinous muscle)
- 2-part lower leg (detachable: gastrocnemius muscle)
- Chest/abdominal wall with detachable mammary gland
- Torso body with skin arm and leg
- 2 lung halves
- 2-part heart
- Liver with gall bladder
- 2-part stomach
- Half kidney
- 4-part intestine set
- 3-part female genital insert with embryo
- 4-part male genital insert

Includes the 3B ANATOMY *trainer*™ and 3B MUSCLE *trainer*™ study programs on CD-ROM (page 95) and a CD-ROM with illustrations and descriptions of the individual structures. Supplied with wooden roller base and assembly instructions.

9985-1002387

Motor Neuron Diorama

Magnified more than 2,500 times, this model represents a fully three-dimensional reproduction of a motor nerve cell situated within a milieu of interacting neurons and a skeletal muscle fibre. The membranous envelope has been cut away from the neuron to expose the cytological ultrastructure, organelles and inclusions within the cell body. Branching dendrites, communicating synapses and a myelin wrapped axon with node of Ranvier, project from the neuronal surface. A section of the axon lifts off to let you view the tightly wound layers of the enveloping myelin sheath and neurolemma, as well as the Schwann cell which formed them. Mounted on a wooden base.

43x20x28 cm; 3.0 kg

3B Scientific® Torsos

Torsos with musculature, life-size or smaller, for secondary education or for medical training: if top-quality human torso-models are important to you, then 3B Scientific is exactly the right choice for you! Our torsos are developed in close coordination with anatomy professors and doctors, and are made in Germany by highly specialised model builders with high quality, toxicologically harmless materials. Since this practice is unfortunately not the case with all manufacturers, consider your health and that of your students and patients and ensure that you are ordering anatomical models with harmless components by asking for an independent study guaranteeing the same.

We were the first manufacturer to order a long term study of one of our models (Torso 9985-1000190) to be examined to verify the safety of our materials. This study was carried out by the TÜV (the nationally recognized independent German inspection organisation). A report of the results can be found on our webpage www.3bscientific.com/downloads,d.html. Because hands-on training tools should not only be vivid and thrilling but also safe!

Whether you choose from the Classic Series, the Luxury Series or one of our special versions, every 3B Torso is:

- developed and modelled in Germany
- accurately manufactured from high quality, harmless materials
- painted by hand true to natural detail

And Classic and Luxury Torsos come with our detailed 3B Scientific® Torso Guide including a CD-ROM.

Classic Unisex Torso, 14-part

This popular school torso is supplied with the following removable parts:

- 3-part head
- 2 lungs
- 2-part heart
- Stomach
- Liver with gall bladder
- 2-part intestinal tract
- Front half of kidney
- Front half of urinary bladder

Supplied with 3B Torso Guide.
87x38x25 cm; 5.9 kg

9985-1000190

3B Torso Guide

- Brilliant coloured pictures of each part of the torsos
- Even the smallest structures are explained
- Valuable teaching tips to create more interesting lessons
- Complete with 7 different languages (Latin, English, German, Spanish, Portuguese, French, Japanese)
- Also on a CD-ROM in pdf format to assist in creating tests or preparing lessons
- Supplied complete in a coloured filing system.

9985-1000183

Classic Unisex Torso, 12-part

The following components of this torso are removable:

- 2-part head
 - 2-part removable heart
 - 2 lungs
 - Stomach
 - Liver with gall bladder
 - 2-part intestinal tract
 - Front half of kidney
- Supplied with 3B Torso Guide.

Unisex Torso with Fixed Head, Back and Shoulder Opened, 17-part

Its neck and back section is opened from the 1st cervical to the 3rd lumbar vertebra and its left shoulder is opened to reveal part of the shoulder blade and part of the humerus. The following parts are made of hard plastic and removable:

- Eyeball with optic nerve
- Brain half
- 2 lungs
- 2-part heart
- 2-part stomach
- Liver with gall bladder
- Intestinal tract
- Front half of kidney
- 1 cervical vertebra, 1 thoracic vertebra, lumbar vertebra
- Pancreas with duodenum
- Front half of bladder

92x42x25 cm; 13.6 kg

9985-1008541

Classic Unisex Torso with Open Back, 21-part

This torso is based on the 9985-1000188 version for students and is equipped with an open neck and back section going from the cerebellum to the coccyx. Vertebrae, intervertebral discs, spinal cord, spinal nerves, vertebral arteries, and many other features are represented in detail. This version contains the following new features in addition to 9985-1000188:

- 7th thoracic vertebra removable
- 6-part head
- 2-part stomach

Supplied with 3B Torso Guide (page 48).

87x38x25 cm; 6.5 kg

9985-1000192

9985-1000192

9985-1000201

African Unisex Torso, 14-part

This popular school torso is supplied with the following removable parts:

- 3-part head
- 2 lungs
- 2-part heart
- Stomach
- Liver with gall bladder
- 2-part intestinal tract
- Front half of kidney
- Front half of urinary bladder

Supplied with 3B Torso Guide (page 48).

9985-1000201

Deluxe Torso Series

The 3B Scientific® Deluxe Torso Series offers all the options you need for detailed demonstrations. You get 100% quality and a high standard of detailed manufacturing. In addition, all torsos of this series are equipped with male and/or female genital inserts, with a 3-month foetus in its correct intrauterine position.

If a unisex torso is not enough for you and a dual-sex torso too much, why don't you choose one of our female or male torsos? Both 9985-1000185 and 9985-1000191 contain the following removable components:

- 3-part head
- 2-part heart
- 2-part stomach
- Liver with gall bladder
- 4-part intestinal tract
- Front half of kidney

Deluxe Dual Sex Torso, 20-part

The quality of this torso is impressive, just like the price! Use it to answer all the questions on internal human anatomy you ever had. It contains these removable components:

- 2-part head
 - Female chest wall
 - 2 lungs
 - 2-part heart
 - Stomach
 - Liver with gall bladder
 - 2-part intestinal tract
 - Front half of kidney
 - 4-part male genital insert
 - 3-part female genital insert with embryo
- Supplied with 3B Torso Guide (page 48).
87x38x25 cm; 7.3 kg

Deluxe Dual Sex Torso with Opened Back, 28-part

This torso offers everything! Interchangeable male and female genital inserts, opened neck and back section to study vertebrae, intervertebral discs, spinal cord, spinal nerves, vertebral arteries etc., a deluxe head with a 4-part brain and much more. A detailed torso for advanced demonstrations. The following parts are removable:

- 7th thoracic vertebra,
- female chest wall
- 6-part head
- Female breast covering
- 2 lungs
- 2-part heart
- 2-part stomach
- Liver with gall bladder
- 4-part intestinal tract
- Front half of kidney
- 4-part male genital insert
- 3-part female genital insert with embryo

Supplied with 3B Torso Guide (page 48).
87x38x25 cm; 7.6 kg

9985-1000200

9985-1000203

Deluxe Dual Sex Muscle Torso, 31-part

With this unique torso you have the top notch in the field of anatomy. It depicts both the superficial and deep muscles, and the two main muscles, the deltoid and gluteus maximus can be removed for closer studies. You can also study the vertebrae, the spinal cord, spinal nerves and vertebral arteries, exchange the male and female genital inserts, investigate the internal structures of the brain etc. The following parts are removable:

- 6-part head
- Chest and abdominal wall with muscles
- 7th thoracic vertebra
- Female mammary gland
- Gluteus maximus and deltoid muscle
- 2 lungs
- 2-part heart
- 2-part stomach
- Liver with gall bladder
- 4-part intestinal tract
- Front half of kidney
- 3-part female genital insert with embryo
- 4-part male genital insert

Supplied with 3B Torso Guide (page 48).
87x38x25 cm; 8.5 kg

**Deluxe Dual Sex Torso with Muscular Arm, 33-part**

A unique feature of this life-size torso is the removable 6-part muscle arm. The high quality model therefore fully represents the anatomy of the complete human upper body. The right half shows the skin, the left half the superficial and deeper muscles with nerves, vessels and bony structures. The following parts are removable:

- 2-part head
- Brain half
- Sternocleidomastoideus muscle
- 6-part muscle arm, removable
- Upper leg stump
- Chest /abdominal wall with detachable mammary gland
- Torso body
- 2 lungs
- 2-part heart
- Liver with gall bladder
- 2-part stomach
- Kidney half
- 4-part intestinal tract
- 3-part female genital insert with embryo
- 4-part male genital insert

Supplied on base board and with 3B Torso Guide (page 48).

Anatomy

You will find our large selection of Charts starting on page 108.

9985-1000294

3-part Skin Model

The model consists of three individual parts on a common stand that represent sections of the human skin with a magnification of 80x. Anatomical differences of the skin sections are didactically represented in an understandable manner. Microanatomical representation of the papillary layer (e.g. localised in the palm of the hand). Microanatomical representation of the reticular layer (e.g. localised at the back of the hand). Longitudinal section through the human scalp with hair follicle and root sheath. All layers making up the skin and microscopic structures such as nerve, vessels and tactile corpuscles have been accurately and spatially realised on the models. 34x29x15.5 cm; 2.05 kg
 L/E/D/S/F/P/J/C/R [www.](#)

9985-1000294

Skin, Block Model, 70 times full-size

This unique model shows a section of human skin in three dimensional form. Individual skin layers are differentiated, and important structures such as hair, sebaceous and sweat glands, receptors, nerves and vessels are shown in detail. Mounted on baseboard. 44x24x23 cm; 3.6 kg
 L/E/D/S/F/P/J [www.](#)

9985-1000291

9985-1000289

Skin Section, 70 times full-size

This relief model shows a section through the three layers of the hair-covered skin of the head. Delivered on base it shows:
 • Representation of hair follicles with sebaceous glands
 • Sweat glands
 • Receptors
 • Nerves
 • Vessels
 26x33x5 cm; 1.0 kg
 L/E/D/S/F/P/J [www.](#)

9985-1000289

9985-1000290

Skin Section, 40 times full-size

The two halves of this relief model show the three layers of hairy and hairless skin in order to make the differences clear. In detail with hair follicles, sebaceous glands, sweat glands, receptor, nerves and vessels. Delivered on base. 24x15x3.5 cm; 0.2 kg
 L/E/D/S/F/P/J [www.](#)

9985-1000290

Skin Section

This model shows the microscopic structure of the skin in great detail. With the help of the different skin sections of the hairless skin (for example palm of hand) and the hairy skin (for example forearm) the different cell layers as well as the embedded sweat glands, touch receptor, blood vessels, nerves and a hair with root can be seen. Furthermore a nail section model on the base shows the nail plate, nail bed and the nail root. The representation of a hair root with all its cell layers completes the skin model. 10x12.5x14 cm; 0.35 kg
 L/E/D/S/F/P/J [www.](#)

9985-1000292

Human Skin Series with Burn Pathologies, 75 times life-size

Six models in one. The front face, compares and contrasts the normal healthy skin from three different body regions; the palm or sole (totally hairless), the axilla or armpit (sparsely endowed with hair), and the scalp (completely hirsute). The back of the model illustrates the progressive severity of injury caused by burns – from the painful reddening and transitory damage of the first degree burn, to the blistering, often permanent damage of the second degree burn, to the deep charring and permanent tissue destruction of the third degree burn. 46 features are coded for identification in accompanying key. Delivered on wooden stand. 46x25x8 cm; 2.75 kg
 E

9985-1005549

9985-1005549

6 Different Stages of Skin Cancer Model, enlarged 8 times

- Healthy
- Malignant cells are found at the surface, within the epidermis
- Malignant cells fill the epidermis, a few invade the papillary layer
- Malignant cells fill the papillary layer
- Malignant cells invade the reticular layer
- Malignant cells have reached the subcutaneous fatty tissue, satellite cells approach a vein

In the top view, the individual stages of externally visible skin changes are shown, allowing for an assessment according to the "ABCDE" criteria. The sides of the model show the various levels of invasion into the skin layers according to Clark (I-V) and the tumor thickness according to Breslow (in mm). 5 original colour illustrations on the base show various types of malignant melanomas. Mounted on a base. 14x10x11.5 cm; 0.2 kg

9985-1000249

9985-1001250

Half Lower Jaw, 3 times full-size, 11-part

The front section of bone and all the teeth are removable, one incisor is longitudinally sectioned. Nerves, blood vessels, the sublingual and submandibular glands are shown.

22x32x9 cm; 1.1 kg

L/D/E/F

9985-1001249

Advanced Half Lower Jaw with 8 diseased teeth, 19-part

The front section of bone and all the teeth are removable, one incisor is longitudinally sectioned. Nerves, blood vessels, the sublingual and submandibular glands are shown. The diseased teeth show various stages of caries from a small and easy-to-treat example on an incisor, through to advanced degradation of a molar, showing exposed root. Using this model it is simple to explain the necessity of good tooth care.

3B MICROanatomy™ Tongue

The latest model in our 3B MICROanatomy™ series, the tongue, is fascinating because it combines enlargements of various different parts of the tongue in one model. It comprises a macroscopic view of the tongue in life size (dorsal view) and microscopic views of the various papillae of the tongue (10-20x life size) and of a taste bud (approx. 450x life size). All views are mounted on a base that also features an overview of the sensory and sensitive innervation of the tongue. A unique model for an intensive study of the tongue.

9985-1005113

Cerebrospinal Fluid Circulation

Enlarged, detailed model of a section through the right half of the brain showing the cut pia mater, arachnoid and dura mater. The model has the cerebrospinal fluid areas clearly identified and the direction of flow indicated by arrows. Bright colours to distinguish important features; identified in English in an accompanying key card. Mounted on stand.

25x18x12 cm; 0.9 kg

E

9985-1005114

Rat Brain Comparative Anatomy

The model shows a rat brain in approx. 6-fold enlargement. Sectioned medially, it can be disassembled into two halves. The right half of the model shows the structures of the cerebrum, cerebellum and brain stem, each of which is colour-coded for didactic purposes (cerebrum = pink, cerebellum = blue, brain stem = yellow), both externally and in the median section. The left half of the model is largely transparent, thus revealing a view of the coloured left lateral ventricle and hippocampus, which can also be seen in the median section. For purposes of comparison, a natural cast of a rat brain and a didactic, small-scale illustration of a human brain in median section are shown on the base, with the same colour coding used for the various regions.

Synapse

Featuring the endoplasmic reticulum, mitochondria and the membranes of the synaptic gap. Also depicts 5 smaller relief models of the main synapse variations.

12.0x11.5x2.7 cm; 0.2 kg

9985-1000237

9985-1000238

Spinal Cord with Nerve Endings

The model illustrates the composition of the spinal cord, magnified to a scale of about 5:1. The spinal cord is formed by a central channel surrounded by “grey matter” with an outer layer of “white matter”. The base features illustrations of various cross sections through the white and grey matter at the neck, torso, lumbar and sacral regions. Supplied on a base.

26x19x13 cm, 0.4 kg

L/D/E/S/F/P/I/J [www](#).

9985-1000238

Motor Neuron Diorama

Magnified more than 2,500 times, this model represents a fully three dimensional reproduction of a motor nerve cell situated within a milieu of interacting neurons and a skeletal muscle fibre. The membranous envelope has been cut away from the neuron to expose the cytological ultrastructure, organelles and inclusions within the cell body. Branching dendrites, communicating synapses and a myelin wrapped axon with node of Ranvier, project from the neuronal surface. A section of the axon lifts off to let you view the tightly wound layers of the enveloping myelin sheath and neurolemma, as well as the Schwann cell which formed them.

Mounted on a wooden base.

This model shows how the tympanic membrane, ossicles, the complex internal ear with the cochlea and the oscillations of the basilar hearing membrane operate /interact. The enclosed mirror enables operation of the model for the studying of various ear functions from different angles at the same time. One single model may be studied by several students simultaneously in an action oriented learning situation. Includes a four colour explanatory chart.

9985-1005528

Larynx with Bronchial Tree and Transparent Lungs

This unique model was created on the basis of computer tomography data of a human (male, approx. 40 years). What is special about this procedure is that the natural spatial 3D relationships and the reciprocal location of the segmental bronchi can be preserved and depicted in a realistic way. The larynx with hyoid bone and epiglottis and the trachea with primary and lobar bronchi are shown in one colour. The larynx is detachable at the level of the second tracheal cartilage and divisible in the median plane. The epiglottis is mounted flexibly. The various segmental bronchi are made of elastic material and detailed in various transparent colours so that they are easier to distinguish visually. The transparent lungs are detachable.

Lung / Heart

9985-1008493

Pulmonary Lobes

The model shows an external pulmonary lobe with a magnification of 130x. The following are represented:

- Segmental bronchus and its terminal branches (bronchioles)
- Alveolus opened on the right side
- Pulmonary vessels and their capillary networks
- Branch of a bronchial artery
- Pulmonary pleura
- Connective tissue septum on the left side
- Single opened alveolus with surrounding capillary network with a magnification of approx. 1000x on the rear side

A graphic representation on the stand of the model shows the structure of the air routes in the lungs up to the alveolus. 26x33x19 cm; 1.4 kg

9985-1000276

Functional Heart and Circulatory System

This amazing working model will bring your lecture to life! A complete schematic model of the human circulatory system with "blood" (coloured water) that flows through transparent veins, arteries, capillaries and heart chambers. This model's special design portrays venous blood, a deep reddish purple and arterial blood, a bright red to give visual reinforcement to the oxygenation and deoxygenation of haemoglobin as it travels the body's vascular network. Mounted on a baseboard with support legs and supplied with teacher's guide, red dye and syringe for refilling the system.

36x16x38 cm; 1.5 kg

E

9985-1005045

3B MICROanatomy™ Artery and Vein

The model shows a medium sized muscular artery with two adjacent veins from the antebrachial area with adjoining fat tissue and muscle enlarged 14 times. The model illustrates the reciprocal anatomical relationship of artery and vein and the basic functional techniques of the venous valves ("valve function" and "muscle pump"). The left vein and the middle artery are fenestrated in the upper anterior segment, revealing the various layers of the wall structure in a cross and longitudinal section and in top view. The right vein is opened throughout in the anterior segment, revealing the orifice of a feeder vein and two venous valves, i.e. "flap valves" formed by a duplication of the tunica intima. On the rear of the model, the relief of two veins is shown to illustrate the functional aspect of the venous valves.

Supplied on base.

3B MICROanatomy™ Kidney

This extremely detailed model shows the morphologic/functional units of the kidney greatly magnified. Six model zones illustrate the following fine tissue structures that serve the production of urine:

- Longitudinal section of a kidney
- Section of renal cortex and renal medulla
- Wedge shaped section of a kidney lobe with a diagrammatic depiction of three nephrons with Henle's loops of different lengths and diagrammatic representation of the vascular supply
- Diagrammatic illustration of a nephron with a short Henle's loop and didactic /diagrammatic illustration of the vascular supply
- Diagrammatic illustration of an opened renal corpuscle with nephron and light-microscopic transverse sections of the proximal, attenuated and distal segments of a renal tubule
- Diagrammatic /didactic illustration of an opened renal corpuscle Mounted on a base.

Model of Kidney Vessels

This corrosion cast contains a real pig's kidney embedded in crystal clear plastic. The size and macro structure of pig's kidneys resemble those of human kidneys. Detailed spatial portrayal of vessel arborisation and progression is very well illustrated with different nuances of colour: red for the arterial flow area, blue for the venous blood vessels and yellow for the pelvicalyceal system/ureter. Each of the specimens is unique and therefore varied in shape. 14.5x8.5x4 cm; ca. 0.5 kg

Red Yellow Blue

Red for the arterial flow area, blue for the venous blood vessels and yellow for the pelvicalyceal system/ureter.

Kidney Stone Model

The renal calices, the renal pelvis and the ureter are opened as well so that concretions or stones can be identified in the following typical positions:

- In the area of the renal pyramids
- In the area of origin of the upper calix group
- In the renal cortex
- In the connecting tubule of the lower calix group, causing congestion of the minor calices (partially closed, partially opened)
- In the ureter

Embryonic Development in 12 stages

The model represents the development of the human germ cells from fertilisation until the end of the 2nd month of pregnancy in 12 stages. Each stage can be removed from the common stand as an individual part and can be removed used for teaching and tests for the embryological specialist field.

- Ovum at time of fertilisation (conception) with male gamete (sperm)
- Zygote at 2-cell stage, approx. 30 hours after fertilisation
- Zygote at 4-cell stage, after around 40-50 hours
- Zygote at 8-cell stage, after around 55 hours
- Morula
- Blastocyst after around 4, 5, and 8-9 days
- Germ cells at approx. 11th day and approx. 20th day
- Embryo at around the end of the 1st and 2nd month of pregnancy

Birthing Station Simulator – Cervical Examination

The Simulator is designed to facilitate the teaching, demonstration, and practice of cervical examination prior to birth. The complete simulator set consists of six separate pelvic blocks. The external appearance of all six blocks is identical with the variations being in the internal structure. Internal texture, tissue density, and correct anatomical size are all carefully represented to provide the most realistic condition possible. The simulators depict six different cervical conditions prior to birth. Each pelvic block is clearly identified on the bottom to indicate which condition exists internally. The different conditions depicted are:

- Stage 1: no dilatation, no effacement
- Stage 2: 2 cm dilatation, 50% effacement
- Stage 3: 2 cm dilatation, full effacement
- Stage 4: 5 cm dilatation, full effacement
- Stage 5: 7 cm dilatation, full effacement
- Stage 6: 9 cm dilatation, full effacement

Delivered with hard wall case.
34.5x18x52 cm; 8.0 kg

Foetal Monitoring and Labour Progress Model Set

This model set provides realistic simulation of vaginal examinations, labour progress, and insertion of the intrauterine pressure catheter. An excellent tool for teaching nursing, medical, or midwifery students.

The lifelike, 3-D model includes:

- foetal head
 - foetal buttocks for breech presentation
 - four interchangeable cervical dilatation models (cervix 1: closed cervix; cervix 2: approx. 2cm; cervix 3: approx. 5cm; cervix 4: approx. 8-9cm).
- Comes with lubricant, teaching suggestions, and carrying case.

14x13x21 cm; 4.8 kg

Practice Makes Perfect!

The birth simulator SIMone™ is a model of a female abdomen with a vulva and the ischial spines as landmarks. Inside the model there is a foetal head with a sagittal suture and fontanelles. The monitor above the model displays an exact image of the position and rotation of the foetal head within the maternal pelvis. Furthermore, the CTG and partogram, as well as documentation (history, findings) and interventions, are displayed. Objective determination of the position of the foetal head in relation to the maternal pelvis is also now possible. SIMone™ represents the complete clinical course including anamnesis, diagnosis and intervention. A variety of delivery scenarios are presented and the cardiocotogram and partogram support the assessment of the course of the delivery. The repositioning of the mother, the administration of medication and amniotomy are all interventions that may be used in order to achieve the necessary progress during the delivery. In order for the physicians that are carrying out the procedures to determine their level of proficiency, all the measures taken during the 'delivery' can be reviewed afterwards. The internationality of mothers-to-be and the number of different scenarios are a true reflection of the realities of the delivery room.

The High Level of Realism in Training with SIMone™ is Unique

- because the instruments are used together with application of the natural force to guide the baby along the natural curve of the pelvic axis (Patented haptics)
- because the characteristic sounds due to the breathing and pain of the mother as well as the foetal heartbeat make the situation very lifelike

The Birth Simulator SIMone™ allows Training in

- correct use of instruments in assisted vaginal delivery
- defining the position of the foetal head in relation to the maternal pelvis
- management of birth complications by means of anamnesis, findings and interventions

Safety During Instrument Use

The simulator presents the haptics required in order to perform the instrument assisted delivery in a medically correct manner: presentation data, placement of the forceps and extraction, taking care of the head of the infant and the maternal soft tissue. The monitoring software provides information in interactive haptic response to the manipulation of the foetal head in the context of force-feedback. The speed and resistance shown during pulling correspond with a real situation.

Recognising the Right Moment

During the delivery scenario, the user of the simulator assesses the course of the delivery and considers all the necessary measures, such as the recognising the correct time for a forceps delivery. In this context questions concerning indications and conditions are always decisive: Are the forceps necessary? Are the forceps feasible?

Professional Endorsement

SIMone™ tested and evaluated by more than 50 doctors with experience in obstetrics. The majority of those questioned (83.0%) stated that the simulator was very highly or highly realistic. Almost all of the participating doctors (96.1%) would recommend other doctors to use SIMone™ for obstetric training to prepare for all sorts of complications effectively.*

* Wulf J, Lüdemann C, Lukutin W, Burgkart R: Expert assessment of a high-fidelity audio and force feedback birthing simulator: a questionnaire-based validation study.

Proceedings of the 14th Annual Meeting of the Society in Europe for Simulation Applied to Medicine; University of Herfordshire, Hatfield, UK, 19-21 June 2008

Using the delivery training simulator SIMone® will enable inexperienced staff (such as young physicians and midwives) to prepare for complications and obstetric emergencies in order to reduce these risks. The fact that more and more C-sections are performed today than ever before, reduces the experience of individuals and therefore underlines the need for such a simulator. Even experienced obstetricians can benefit from extra training managing the challenges of difficult birth scenarios, with the benefit of feedback relating to the haptic performance, e.g. during vacuum or forceps delivery. SIMone® is an excellent simulator to train both obstetricians and residents in operative delivery techniques. The feeling and confidence that the trainees have been in the situation with successful results will allow them to respond quickly and appropriately to the mother and foetus during labour. The numerous intervention and delivery scenarios keep the students and young physicians always able and ready to cope with particular problems that can occur during delivery. The process of learning through assessment and error correction promotes a powerful learning environment. Memory and retention are clearer with simulation.

SIMone™ Birth Simulator

Unique simulator with haptic, visual and acoustic interface as a training module for the use of instruments during an assisted vaginal delivery.

Includes:

- Simulator mechanics with maternal pelvis, foetal head etc.
- Software with 5 scenarios for model-based training of instrumental delivery and problem based training of birth management
- Future compliance by progressive upgrade with additional scenarios
- 1 Suction cup, Menox ø 60mm
- Hand vacuum pump 0-1.000 mbar
- 1 Obstetrical forceps:
 - N = Naegele 36cm, S = Simpson 30 cm,
 - T = Tarnier 38 cm, MT = McLean-Tucker 39 cm
- 2x 200 ml lubricant (9985-1009867)
- Latex free disposable gloves, size 8 (M) and 9 (L), 100 pieces
- 2 Spare genital inserts (9985-1008555)
- 19" Flat screen, computer unit and multi-range power supply unit (110-240 V, 50/60 Hz)
- Adapter for plug types B, D, E, F, G /BS1363, I, J, L and M (150 countries)
- Table with drawer for accessories
- Set-up and Operating Instructions
- 3 Year guarantee

Software is available in the languages DE, ES, FR, GB and US

Childbirth Simulator

This versatile simulator features the pelvic cavity with major anatomical landmarks and painted outline of bony pelvis. It allows intra uterine manipulation and various training possibilities for prenatal, intra partum, and postpartum skills as follows:

- Foetal palpation of fontanelle, backbone, knees, and elbows
- Vertex presentation
- Normal vaginal delivery
- Complete, frank and footling breech delivery
- C-section delivery
- Vertex and breech presentations in multiple delivery
- Demonstration of placenta previa: total, partial, and marginal
- Prolapse of umbilical cord
- Ritgen's manoeuvre
- 3 soft vulva inserts for episiotomy exercises
- Normal delivery of umbilical cord and placenta
- Suction of baby's nose and mouth

Supplied with 2 stomach covers (skin-tone /transparent), 1 male and 1 female foetus with placenta, 5 umbilical cords, 2 umbilical clamps, talcum powder and carrying bag.

53x33x43 cm; 8.0 kg

9985-1005814

Palpation Module for Leopold's Manoeuvres

This module consists of a foetus, 2 cushions which may be inflated with air and an inflation device. Inflation of the lower cushion raises the foetus to desired position; inflation of the upper cushion creates a firm abdomen as in the ninth month of pregnancy. The foetus with palpable fontanelle, spine, shoulders, elbows, and knees may be placed in normal, breech, or transverse position and will be cradled between the 2 cushions.

33x30x18 cm; 1.8 kg

E

9985-1005823

Labour Delivery Module

The 6 labour stations represent conditions of the cervix and vagina prior to labour, during labour, and at birth in a primigravid woman.

Stations illustrated are:

- Station -5: Prior to onset of labour
- Station -4: Cervix partially effaced
- Station -3: Cervix fully effaced
- Station 0: Foetal head at plane of ischial spine
- Station +2: Cervix nearing full dilation
- Station +5: Crowning of foetal head

Delivered with carrying case.

52x34.3x16.5 cm; 0.5 kg

E

9985-1005824

Foetus for Vacuum Delivery (not shown)

Features smooth, soft skull with fontanelle for realistic vacuum delivery. With placenta and umbilical cord.

52x14x11.4 cm; 1.0 kg

NOELLE® Birthing Simulator

- Full size articulating full-body female
- Intubatable airway with chest rise
- IV arm for meds / fluids
- Removable stomach cover
- Practice Leopold Manoeuvres
- Multiple foetal heart sounds
- Automatic birthing system
- Measure head descent and cervical dilation
- Multiple placenta locations
- Replaceable dilating cervices
- Practice postpartum suturing on vulval inserts
- 1 articulating birthing baby with placenta
- 1 resuscitation baby with intubatable airway and umbilical catheter site
- New postpartum haemorrhage and palpation module

Supplied with:

- 2 umbilical cords
- 2 dilating cervices
- 2 umbilical clamps
- 2 vulval inserts
- 3 vulva for postpartum suturing
- Talcum powder and silicone lubricant
- NOELLE training guide
- NOELLE teaching guide with scenarios
- Carrying bag

E

9985-1012417

NOELLE® Birth Simulator with PEDI® Blue Neonate

- Full size articulating full-body female
- Intubatable airway with chest rise
- IV arm for meds / fluids
- Removable stomach cover
- Practice Leopold Manoeuvres
- Multiple foetal heart sounds
- Automatic birthing system
- Measure head descent and cervical dilation
- Multiple placenta locations
- Replaceable dilating cervices
- Practice postpartum suturing on vulval inserts
- 1 articulating birthing baby with placenta
- PEDI® Blue Neonatal Simulator with SmartSkin™
- New postpartum haemorrhage and palpation module

Supplied with:

- 2 umbilical cords
- 2 dilating cervices
- 2 umbilical clamps
- 2 vulval inserts
- 3 vulva for postpartum suturing
- Neonatal monitor
- International power supply 100-240 VAC
- Connecting cables
- Talcum powder and silicone lubricant
- NOELLE training guide
- NOELLE Teaching Tips with scenarios
- Carrying bags

Episiotomy Suturing Simulator, Set of 3

This simulator provides a realistic way for students to learn surgical techniques without the constraint of time and concern for safety, which are factors with a live patient. In addition to being portable, the lifelike texture allows the learner to develop a “feel” for instrument handling, tension on suture and the advantages of one method of tying knots over another. The set includes midline, left mediolateral and right mediolateral episiotomies and is supplied in a storage case.

Needle holder, suture material and tweezers are not included in scope of delivery.

20x15x7 cm; 1.5 kg

Wearable Breast Self Examination Model

Demonstrate realistic self examination with our natural casting of a female upper body with medium sized breasts. It can easily be worn, in order to better train and practice breast self examination.

- Made of 3B SKINlike™ high quality silicone
- Displays the skin in finest detail
- Very realistic to the touch and dermatologically tested
- Breast examination is possible in both upright or lying positions
- Benign and malignant tumours in different stages of development hone self examination skills
 - 2 benign tumours
 - 4 malignant tumours
 - 2 typical anomalies
- Includes "Female Breast" chart
- Supplied with talcum powder, harness, stand and aluminium carrying case

56x44x24 cm; 11.5 kg

9985-1005159

Clinical Breast Trainer

This trainer combines modularity and practicality for clinical skills in diagnosis and palpation.

- Five identifiable anatomical anomalies.
 - Fluid filled cyst for aspiration and palpation
 - 2 palpable lumps (approx. 1 cm and 1.5cm diameter) on the lateral side of the breast
 - Infection in armpit in axilla region
 - Lump in tissue above the clavicle
 - Modular design for simple replacement of skin, cyst, lump axillary gland
 - Skin detaches for replacing cysts
 - Realistic tactile feel
 - Easy to keep clean
- 22x25x14 cm; 2.0 kg

9985-1008497

Female Breast and Chest Wall with Representation of Different Diseases

Milk giving right breast:

- Medially divided into 2 halves, held together with magnets
- Healthy milk-giving breast tissue on the cut surface of the external half
- Breast gland inflammation (mastitis) on the cut surface of the inner half

Non milk giving left breast:

- 2 saggital cuts, can be separated into 3 parts, held together with magnets
- Healthy anatomical structures on the sectional plane of the external half
- Skin on the external half is windowed to view the regional lymph nodes
- Cysts and fibroadenoma on the external sectional plane of the middle breast cut
- Pathological proliferation of the breast connective tissue (fibrocystic breast disease) on the inner sectional plane of the middle breast cut
- Malignant tumours on the sectional plane of the inner breast cut

9985-1008497

Gynaecology Simulator

This simulator represents a female adult lower body with removable soft outer skin as well as anatomically accurate fimbriae and ovaries. Various pelvic examinations including recognition of pathologies and placing of contraceptive devices can be trained. Features include:

- Vaginal speculum and bi-manual pelvic examination
- Uterine sounding
- Insertion and removal of contraceptive devices such as IUD, diaphragm, cervical cap, contraceptive sponge or female condom

The simulator is supplied with normal and abnormal cervixes and uteri which can be easily changed:

- 1 normal anteverted uterus with transparent top and round ligaments
- 1 normal uterus
- 6 uteri with external pathologies
- 2 normal cervixes with patent as for IUD insertion / removal
- 6 cervixes with pathologies

Supplied with talcum powder and carrying bag. Speculum is not included in scope of delivery.

51x46x25.5 cm; 8.5 kg

Gynaecology Simulator

This simulator represents a female adult lower body with relevant internal anatomical landmarks and anatomically accurate fimbriae and ovaries. Various pelvic examinations including laparoscopy, mini laparotomy as well as recognition of pathologies and placing of contraceptive devices can be trained. Features include:

- Vaginal speculum and bi-manual pelvic examination
- Uterine sounding
- Insertion and removal of contraceptive devices such as IUD, 75mm diaphragm, or female condom
- Laparoscopic visualisation and occlusion of fallopian tubes
- Mini laparotomy

The simulator is supplied with normal and abnormal cervixes as well as normal and pregnant uteri which can be easily changed:

- 1 anteverted and 1 retroverted parous uterus
- 2 pregnant uteri (ten week / twenty week)
- 5 normal cervixes with patent as for IUD insertion / removal
- 4 cervixes with pathologies

Supplied with 10 fallopian tubes, talcum powder and carrying bag.

The image shows an opened model to make the inner structures visible.

The model is supplied with a closed abdomen. Hook is not included in scope of delivery.

Gynaecology Trainer

The life like female pelvis allows the development of diagnostic skills in gynaecologic procedures through anatomical instruction, abdominal palpation and speculum insertion. Constructed of soft, easily cleaned vinyl materials that approximate skin texture, the trainer provides detailed life like anatomical features and references. Included are the following interchangeable inserts:

- Normal cervix and uterus for IUD insertion and removal
- Normal parous cervix
- Cervix with endocervical polyp
- Cervix with ectropion characteristics
- Cervix with neoplasia (carcinoma)
- Pregnant 10 week uterus
- 2 adnexal masses

30.5x33x33 cm; 4.0 kg

E

9985-1005723

Family Planning Educator

Desktop simulator for training and demonstration of:

- Introduction and removal of a diaphragm, an IUD or sponge contraception devices
- Normal and abnormal uterine positions
- Bi-manual examination technique

Supplied with:

- One anteverted uterus with clear upper half to illustrate correct position of IUD
- One uterus to illustrate normal anteversion and retroversion
- Cervix with patent os attaches to uterus suspended within pelvic cavity
- Soft plastic stomach cover
- Carrying bag

3B Scientific® Models of Cell Division

These three dimensional relief models are painted according to the usual colouring methods of microscopy, making the process of cell division easy to understand. The cell organelles are shown opened up in the lower part of the models. The models are equipped with magnets on the back so that for teaching purposes, they can be arranged easily on a magnetic board in the classroom. The model series is supplied in a storage system (40x60 cm) which can be fastened to the wall. A detailed description and handouts for your lessons are included.

9985-1000521

Mitosis Model

Shows the 9 stages of mitosis on the basis of a typical mammal cell at an enlargement of approx. 10,000 times:

1. Interphase
2. Prophase
3. Early prometaphase
4. Later prometaphase
5. Metaphase
6. Early anaphase
7. Later anaphase
8. Telophase
9. Cytokinesis

Tip: As a useful addition and permanent eye catcher in the classroom we recommend the matching wall chart "Mitosis" (product number V2049M, V2049U).

Glass Cell, 40,000 times full-size

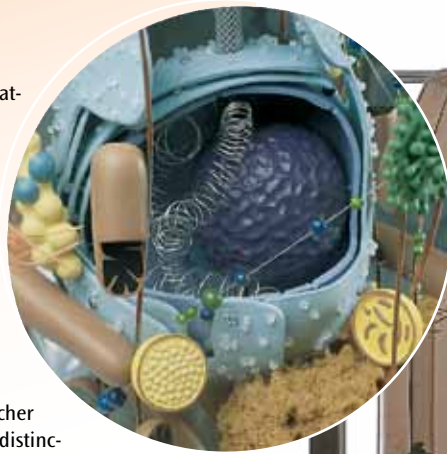

This unique model represents an undifferentiated human cell at an enlargement of 40,000 times. It provides a means of studying the structure of the smallest unit of any living creature capable of independent life, as seen through an electron microscope. The model shows the essential function bearing cell organelles. Their arrangement in the model provides a momentary snapshot of the dynamic balance of a cell. The cell nucleus, a few mitochondria and the lysosomes are shown in section, so that their internal structure is visible. The glass cell is an eye catcher in many exhibitions and has received several distinctions such as "World Didac Gold Award 1990".

Mounted on bar stand.

9985-1001600 **

Giant DNA Model

At nearly 90 cm in height, this DNA Molecule is ideally suited to the classroom environment. Magnetic connectors, representing hydrogen bonds, permit the two strands of the double helix to unzip completely, evoking the mechanism of DNA replication, and RNA synthesis (genetic transcription). Removable nucleotides let students experience first hand why a larger purine base must always pair with a smaller pyrimidine base, and that base pairs are complementary – adenine pairing with thymine and guanine pairing with cytosine. Non separable atoms connected by permanent flexible "bonds" form the sugar-phosphate backbone of the molecule. Encompassing six base pairs the double helix is mounted on a wooden base and can be rotated.

3B MUSCLEtrainer™ – Master the muscles in the blink of an eye!

Do you need to learn all about the human muscle system? Then the 3B MUSCLEtrainer™ is just what you require. With it's 248 high quality digital images, 241 muscles and more than 200 associated anatomical structures, the 3B MUSCLEtrainer™ is the ideal tool to help you revise for your exam or simply refresh your knowledge.

Optimal Exam Preparation:

- Over 440 different muscles and structures
- Origin, insertion, innervation and function can be displayed

Interactive Quiz Function with:

- Variable quiz parameters
- Number of attempts
- Time pressure
- Immediate and systematic quiz evaluation
- Long term graphic learn control over all areas

Additional Highlights:

- 5 language version: English, French, Spanish, Portuguese, German, (Latin)

Info about:

- Spinal nerve segment
- Associated joints
- Important clinical and sports aspects
- Zoom to 200% – no interpolation!
- Fully hyperlinked index
- Runs directly from CD-ROM

Excellent for medical, physiotherapy and sport science students, sport and fitness trainers, healthcare professionals, etc.

9985-1002489

3B ANATOMYtrainer™ – Clever Way to Pass your Examinations

Are you training to become a doctor, dentist, physiotherapist etc.? Then the 3B ANATOMYtrainer™ is the right tool to help you achieve your ambitious goal. Almost 400 high resolution digital images and almost 3,000 exam relevant anatomical structures give you fast access to human anatomy. Furthermore, the unique structure of the 3B ANATOMYtrainer™ helps you organize your study time, allows you to perform complex test routines, immediately analyzes your results and monitors your long-term learning progress.

NEW:

- Any number of memo boxes can be saved as a study list and reopened at a later point in time – this allows you to adapt the subject areas for study even more specifically to your needs
- The study lists can be exchanged among different users of the 3B ANATOMYtrainer™ 2.0 – ideal support when preparing for exams!
- Extensive printing functions for the illustrations, lists of terms, memo box, etc.

Optimal Exam Preparation:

Unique new quiz function with selectable parameters such as:

- Subject areas to be tested
- Time pressure
- Number of attempts
- Multiple choice mode (what is it?)
- Location questions (where is it?)
- Instantaneous and systematic analysis of quiz results
- Organization of revision tasks with long term progress evaluation

Additional Highlights:

- 5 language version: English, French, Spanish, Portuguese, German, (Latin)
- 3D selection figure
- Zoom to 200% – no interpolation
- Fully hyperlinked index
- Extra glossary with over 300 general terms explained
- Runs directly from CD ROM, no installation necessary

9985-1002487

3B NEUROtrainer™ – Quick Help for Clever Students

Do you want to study the structures of the brain without going crazy? Then the 3B NEUROtrainer™ is the right program for you. Over 800 anatomical terms and 110 accurate illustrations are waiting to be interactively used by you throughout this complex field of human anatomy. The unique quiz function and the clearly organized status of our study progress allow for steady planning of your objectives. Therefore, together with the lectures and prep course, the NEUROtrainer™ provides optimal support for exam revision.

Optimal Exam Preparation:

Unique new quiz function with selectable parameters such as:

- Subject areas to be tested
- Number of attempts and time pressure
- Multiple choice mode (what is it?)
- Location questions (where is it?)
- Instantaneous and systematic analysis of quiz results

Unique Worldwide – the 3B NEUROteacher™

The 3B NEUROteacher™ is a unique worldwide lecture program on DVD-ROM to assist you in preparing and giving lectures in the field of neuroanatomy. You can either edit the available lectures and adapt them to your individual needs or design new ones. Topographical anatomy and morphology, functional systems and vessels of the CNS are shown in 74 different 3D media objects (3D images and animations) with over 800 structures labelled. The 3D images can be rotated freely and can be shifted or zoomed. When the mouse is rolled over a structure, the structure is labelled. When a structure is selected from the list, the image will automatically rotate to reveal the structure. The structure itself is displayed either in Latin or in the user language (English, German, French, Portuguese or Spanish). Lectures can even be made available to students via network or collected on your laptop for use in external lectures or presentations.

You can order the DVD-ROM with the full version of the 3B NEUROteacher™ free of charge for a 7-day testing period.

The DVD-ROM includes around 5 gigabytes of teaching material. A library includes the 74 labeled 3D media objects and 10 ready prepared classic lectures:

- Highlights
- The CNS (Neuraxis)
- The Brain (Encephalon)
- Spinal Cord, Brainstem and Cerebellum
- The Diencephalon
- The Cerebrum
- The Cranial Nerves
- Ventricular System and Arteries
- The Motor System
- Sensory Systems

The 3B NEUROteacher™ supports the usage of a broad pallet of file formats:

- Graphic format: .bmp; .jpg; .gif; .tif; .psd; .pct; .tga; .png
- Multimedia: .swf; .dir; .dvr; .dcr
- Video format: .mov (QT 2, 3, 4); .avi
- Audio format: .wav; .mp3; .aif; .au; .swa
- Text format: .htm; .txt; .rtf

3B NEUROteacher™, Single User License

9985-10106

3B NEUROteacher™, Fifteen User License

9985-10107

System Requirements for 3B NEUROteacher™:

- **Windows:** Windows 98/ME/NT4 (SP3)/2000, Processor: Intel Pentium III or compatible, 450 MHz, RAM: 128 MB
- **Macintosh:** Mac OS 8.1 or higher, MAC OS X not yet supported, Processor: Power PC, G4; RAM: 80 MB available
- **Monitor resolution:** 800 x 600 pixels, colour depth 16 Bit, high colour, 3D graphic card recommended

The New LIEDER Program of Interactive CD-ROM

We offer a new range of CD-ROM for interactive learning and teaching in school and higher education. All pictures and illustrations are taken from our own stocks to provide superior quality. Newly developed programs guarantee easy installation and unproblematic running. Every CD comprises the following topics:

- Comprises a great variety of beautiful diagrams, colour photos, tables, anatomical pictures, electron and X-ray photographs, impressive life cycles, human photographs, landscape photographs, scenes, test data and results, necessary for teaching the subjects.
- Comprises all necessary photomicrographs of microscopic slides, which can be observed by five different steps of magnification by using a "MicroScope". The slides can be moved under this microscope and can be observed in all its parts.
- Comprises all necessary drawings matching the pictures, with explanations of all the parts.
- The same number of comprehensive explanatory texts to help understanding the pictures.
- A special test program to check the students' knowledge in several levels of difficulty. A variable number of random selected pictures have to be identified. After a successful run the students receive notes about their progress in learning. By repeating the test any improvement will be revealed by the program.
- A comprehensive index, a search function and a user friendly browser for all pictures and texts on every CD-ROM.
- All pictures can be shown in full screen size, just by pressing the ENTER button.
- Special accompanying material, which enables evaluation of what has been seen, and creative learning is an important part of the program. Drawings, sketches and worksheets are supplied for many of the pictures on the CD.
- The novel demo program features the functionality to start a self running demo of the program in sequential or random order.
- The complete set of images on this CD can be displayed in thumbnail view for a comprehensive overview of all available material.
- A comprehensive index. The entire set of material, that is, pictures, supplemental texts and slides, and drawings, are accessible via the main program's dropdown menu.
- The texts will be provided in several languages by pre-selection when starting the program.
- All pictures and texts can be printed by the user.
- The CD works with all Windows versions (WINDOWS™ 95, 98, NT, 2000, XP and VISTA). The resolution is 960 x 640 or higher for superior quality. Full colour representation with over 1 Million colours (depending on the screen).

“Benny” – The Anatomical Teddy®

Does this problem sound familiar: You try to explain to a small patient facing surgery why an operation has to be done and where the organ to be operated on is located, but all you look into is a pair of blank and frightened eyes? Benny is a hand made teddy bear and will help you and your little patients to explore the methods of examination and surgery in an easily comprehensible way!

- The zipper on the stomach can be opened from the top or bottom and simulates an operation of the abdomen and chest
- The bones of the legs and arms can be demonstrated by opening the zippers
- Spine, chest and ribs are palpable
- Artificial blood (in the form of fruit tea) can be put into 2 tubes in the arm and hand and withdrawn with a cannula

Benny is washable and his fur is made of a flame retardant polyester fibre which gives him an extra soft and fluffy touch.

50 cm; 0.7 kg

Down's Syndrome Doll (Trisomy 21)

The Down Syndrome Doll was designed to promote self acceptance and self identification of children with Down's Syndrome. They are available with their mouths open or closed. A doll with a closed mouth will encourage children to keep their tongues in their mouths. The doll is ideally suited and educationally beneficial as a toy for non disabled children. Learning from play and appreciating the environment contributes to better understanding and acceptance of people with disabilities. The Down's syndrome doll displays the following typical features: Open mouth, round face, short hands, characteristic eyes, widened space between first and second toes. 45 cm; 0.5 kg

Nursing Kid

Nursing Kid is a training manikin realistically representing a six-year old child. He is designed for skill and scenario based training of the care and management of a variety of paediatric in-hospital patients. Skills include sound auscultation, IV cannulation, urinary catheterization, and general paediatric patient care. This child is ideal for clinical training in core paediatric in-hospital clinical skills.

Product features:

- Head with anatomical landmarks, trachea, and oesophagus along with simulated lungs and stomach allow the practice of many procedures, including NG, OG, tracheal care and suctioning, and insertion, securing and care of endotracheal tubes
- Allows for the auscultation and diagnosis of normal and abnormal heart, breath and bowel sounds when used in conjunction VitalSim™
- Bilateral deltoid, bilateral thigh, gluteal intramuscular injections possible
- Articulating IV arm allows for practice of IV cannulation, medication administration and site care and maintenance
- Presets normal and abnormal heart, breath and bowel sounds for auscultation
- Pre-programmed and instructor controlled scenarios aid in standardising teaching when used in conjunction VitalSim™

Supplied with: Full body paediatric manikin, manikin lubricant, simulated blood, hospital gown, carry case, directions for Use.

The clinical skills training manikin for in-hospital infant professionals Nursing Baby is an infant manikin designed for scenario based training of the care and management of a variety of infant in-hospital patients. Training includes sounds auscultation, IV and IO skills, fontanelle assessment, urinary catheterization and general paediatric patient care.

Product features:

- Normal, bulging and depressed fontanelles for assessment and diagnosis
- Head with anatomical landmarks, trachea and oesophagus along with simulated lungs and stomach allow the practice of many procedures, including NG, OG, tracheal care and suctioning
- Bilateral deltoid and bilateral thigh intramuscular injections are possible
- Articulating IV arm and IV leg allows for practice of IV cannulation, medication administration, site care and maintenance
- Medication and fluid administration through intraosseous infusion allowed via tibia access with landmarks at the tibial tuberosity and medial malleolus
- Gastrostomy tube opening for care and feeding
- Presents normal and abnormal heart, breath, and bowel sounds for auscultation when used in conjunction VitalSim™
- Interchangeable genitalia allows for urinary catheterization with fluid return, rectal temperature simulation, and administration of suppositories
- Pre-programmed scenarios aid educators in standardizing teaching when used in conjunction VitalSim™

Geriatric Care Manikin, I

This nursing manikin features an elderly appearance and is convertible between male and female. It allows the practice of a wide range of basic nursing skills. Skin wrinkles, reddened skin fold, a dilated pupil, a stage I decubitus sacral ulcer, a normal mole and a cancerous mole are represented. The neck and all major joints are fully movable into any natural human position. Hands and feet are made of soft, flexible material for added realism. Delivered in storage carton. The following nursing procedures can be performed:

- Prostate examination (Stage B)
- Ostomy Care (Ileostomy and colostomy lavage and suctioning)
- Tracheostomy care (lavage and suctioning)
- Placement of Naso-gastric tubes
- Oral and nasal lavage, gavage and suctioning
- Pap smears and douching
- Intramuscular Injection (arms, thigh, buttock)
- Oral hygiene (removable upper and lower denture)
- Eye irrigation
- Bed baths, hair care (washing, combing)
- Patient positioning and transfer techniques, clothing changes
- Ear irrigation and hearing aid placement
- Bandaging and wound dressing (including fingers and toes)

3B Scientific® Patient Care Manikin, I

The only manikin you need to teach and practice:

- Personal hygiene, cleaning (removable partial prosthesis)
- Lifting, mobilization
- Bandaging and wound dressing (including stump dressing)
- Irrigations (eye, ear, nose, stomach, intestine, bladder)
- Injections (intramuscular and subcutaneous)
- Naso-gastric lavage and gavage
- Oxygen treatment, artificial respiration
- Tracheotomy care
- Catheterisation (male and female)
- Ostomy care (colostomy)
- Enema administration

Our best selling patient care simulator allows practice of most training applications from basic to advanced nursing, clinical and emergency training. Made of durable, unbreakable, water-resistant plastics, it is also flexible, allowing natural movement of the arms, legs and joints. Our unique flexible waist design allows the manikin to sit upright for added realism. Lungs, heart, stomach, bladder and intestinal section are removable and fitted with drainage seals for easy cleaning. Bladder and intestinal section are absolutely watertight and connected to the external genitalia to allow catheterisation. All standard injection sites have special injection pads (6 in all) which allow repeated injections and years of use. Also included is an amputation stump to practice dressing techniques. To complete this deluxe manikin, we've included an intestine tube, catheter, duodenal probe, talcum powder, vaseline and lubricant.

174 cm; 21.0 kg

Nursing Kelly

Kelly nursing manikin was especially designed for patient care training scenarios and includes a large range of clinical diagnoses. This full body adult male manikin is excellently suited to train beginner hospital healthcare professionals.

Product features

- Head with anatomical features, trachea and oesophagus together with simulated lungs and stomach allow many procedures, including OG tube, tracheal care and suctioning.
- Using a standard stethoscope, students can auscultate normal and abnormal cardiac, lung and intestinal sounds (9985-1005213 VitalSim™ required).
- Realistic palpation and auscultation using a blood pressure arm controlled by the instructor. Adjustable systolic and diastolic pressure, auscultatory gap and volume (9985-1005213 VitalSim™ required).
- IV cannulation, medication administration, site care and maintenance are allowed in the antecubital area and the dorsum of the hand, accessing the median, basilic, and cephalic veins
- Dosed administration of medications via intramuscular injections at the deltoid, gluteal, and lateral thigh muscles.
- Realistic male and female urinary catheterization and enema procedures may be performed with fluid return
- More functions possible in conjunction with VitalSim™, with which scenarios can be created, edited and replayed. Pre-programmed scenarios assist the instructor during standard training (9985-1005213 VitalSim™ required).

Includes: adult male full body manikin, hospital gown, lubricant, assembly tools and instruction manual

Nursing Kelly, Non-VitalSim™ Capable

9985-1005246

VitalSim™

Using the programmable wireless or hand-held wired remote, the VitalSim™ control unit works with VitalSim™ capable manikins and task trainers to simulate ECG, sounds, blood pressure and pulses.

Sounds

- Heart sounds synchronised with programmable ECG
- Auscultated lung sounds synchronised with breathing rate, 0 – 0 BPM
- Individual lung or bilateral sound selection
- Normal and abnormal bowel sounds
- Vocal sounds – computer generated sounds, mixed with voice input (via microphone sold separately)

Blood Pressure/Pulses

- Auscultated and palpated blood pressure with brachial radial pulse control
- Pulses and Korotkow sounds synchronized with programmable ECG
- Systolic and diastolic pressures may be set individually in steps of 2 mmHg
- Auscultative Gap with on / off feature
- Pulse strength dependant on BP

Logging/Scenario Functions

Control unit can be connected to PC using USB cable for:

- Uploading and running up to ten scenarios programmed using PC Scenario Editor
 - Downloading of up to 25 logs for “after action” review / debriefing
- Includes: Control unit with battery case and batteries (6), remote control including batteries (4), manikin to unit cable, operating device to control unit cable, USB cable for connection to PC, AC adapter, software CD, carry case and directions for use.

35.6x28x18 cm; 3.6 kg

Wound Care Assessment Set (Male)

9985-1005251

Nursing Anne

Designed for simulation and practice of a complete range of patient assessment and care procedures. Including sounds auscultation, vocal sounds and an updated blood pressure arm, when used in conjunction with the new VitalSim™ Vital Signs Manikin Simulator. The addition of modules for breast examination, post surgical mastectomy care and fundus massage skills makes this full body, adult female manikin the complete care doll. Full body, anatomically accurate manikin with realistic articulation. The head with anatomical landmarks, trachea and oesophagus, along with simulated lungs and stomach allow the practice of many procedures:

- Irrigation of the eye and ear (simulated)
- Application / instillation of medications in the eye, ear and nose, including nasal packing
- Mouth and denture care procedures
- Insertion and suctioning of oropharyngeal and nasopharyngeal airways
- Insertion, securing and care of endotracheal tubes
- Tracheotomy care and tracheal suctioning
- Various oxygen delivery procedure
- NG tube insertion, care, medication administration and removal
- Gastric lavage and gavage
- Nasoenteric and oesophageal tube insertion, care and removal
- Manually generated carotid pulse
- Subclavian IV, various ostomy and chest tube openings for site care and maintenance

Includes: Adult, full body female manikin, hospital gown, manikin lubricant, assembly tool kit and directions for use.

Please note that the VitalSim™ unit must be ordered separately. 108x53x48 cm; 38 kg

Options and Replacements for 9985-1005212

Breast Examination Module

The Breast Exam Module facilitates training in the recognition of breast disorders, sizes of nodules, and relative locations by simulating multiple abnormalities found during breast examinations.

- Normal anatomy of female breasts
- Interchangeable abnormalities to be used with breast modules
 - Fibroadenoma
 - Cyst
 - Solid lump/ mass

E

9985-1005271

Fundus Skills and Assessment Module

The Fundus Skills and Assessment module features the normal anatomy of the status-post or post-partum female abdomen designed for training fundus assessment and massage skills.

E

9985-1005273

Mastectomy Module

The Mastectomy Module is used to practice post surgical mastectomy care procedures.

- Normal anatomy of a post operative left total mastectomy
- Surgical area skin closed with staples
- Drain tube placed just under the skin

Patient Care

Ideal for Teaching, Patient Education and Medical Education!

By popular demand, we have redesigned our 3B Scientific® Charts to make them more versatile. Of course, as always they dynamically illustrate and skillfully describe the most important points of a subject. No one offers more languages and hardly anyone offers a comparable selection of subjects and versions.

And now you can decide what type of chart you want. The black plastic rods with eyelets for hanging ensure the greatest possible flexibility. These practical rods are easy to handle, enable you to affix the charts to the wall inexpensively and attractively and protect the charts from damage. Simply order item number 9985-1002372 (2x50 cm) or 9985-1002373 (2x98 cm) along with the charts of your choice to receive a complete set for top and bottom. If you prefer a different mode of attachment or wish to use a decorative picture frame, the paper version supplies you with all you need – without any unnecessary and expensive frills!

Or would you prefer the laminated deluxe version? It is enhanced with a front and rear 125 micron thick film coating and is already equipped with two metal eyelets for wall attachment. Particularly long lasting, particularly durable, particularly valuable!

The Right Choice for Everyone:

Inexpensive paper version ()*

- For a skilled overview of medical subjects
- With richly detailed illustrations
- For use as a poster or with your own frame

Practical rods for the paper version

9985-1002372 (2x50 cm), 9985-1002373 (2x98 cm)

- Ideal for wall attachment
- Very easy to use
- Made of robust and long lasting plastic

*Value preserving laminated deluxe version (**)*

- For heavy duty use
- Can be written on with non-permanent markers
- Can be wiped off anytime
- Good UV resistance
- Environmentally friendly special film coating

All of the versions are printed on 50x67 cm practical poster size high quality 200 g image printing paper (exception: 9985-4006730 Body acupuncture 98x68 cm).

Also available in German, French, Spanish, Italian and Japanese (Japanese in size 30x40 cm). Some products from our range are also available in Brazilian, Portuguese and Russian. Please contact us!

The series is constantly expanded so you will soon find the anatomical wall charts you need, but haven't seen yet on these pages. If there is a subject you're missing, get in touch with us, we might already be working on it.

If not, we always appreciate good ideas.

Study and Information System for Self Study

Clear layout, inexpensive, effective. Printed on stable cardboard sized DIN A7. Comes in an index-card box.

The Muscular System on Study Cards

- Each muscle illustrated separately
- Identification of origin, insertion, nerve, function, synergists and antagonists
- 303 study cards with 315 illustrations

“Thin Man” – Sequential Human Anatomy Programme

Lets you explore body regions layer by layer by peeling away transparent mylar overlays. Displayed on the rear of the Thin Man is a full-figure view of the skeletal and nervous systems. Over 200 anatomical features are named, indexed, and keyed. The layers display the following systems:

- 1st layer – Musculature of the head, neck, thorax and abdomen
- 2nd layer – Brain, thyroid and salivary glands, eye, tongue, teeth, heart and major vessels, lungs, stomach, liver and intestines
- 3rd layer – Sinuses, nasal, septum, tongue, trachea, heart, chambers, and vessels, pancreas, spleen, large intestine
- 4th layer – Oesophagus, pleura, aorta, inferior vena cava, intercostal vessels and nerves, autonomic nerve trunk, kidneys and adrenal glands
- 5th layer (full figure) – Brain, pharynx, vertebral column, rib cage, muscles of upper and lower extremities, pelvic organs and muscles

The Lifeform® NG Tube & Trach Skills Simulator

The Lifeform® NG Tube & Trach Skills Simulator has been developed to aid with the instruction, training and practice of vital tracheostomy skills and care for patients with respiratory conditions. The simulator is also designed for instruction of gastrointestinal care procedures through nasal and oral access. With a newly designed Lifeform® head and torso, this simulator features realistic landmarks, trachea, oesophagus, lungs and stomach. For exceptional realism, methyl cellulose can be mixed with water to simulate mucous-like fluids of a real patient. Fluid can be added to the lungs and stomach for realistic tracheostomy care and suctioning. The simulator also allows for the practice of the following:

The simulator also allows for the practice of the following:

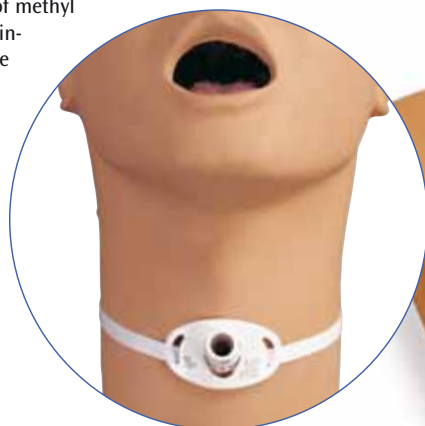

- Dressing changes and cuff inflation
- NG tube care, including insertion, irrigation, and removal
- Gastric lavage and gavage
- Feeding tube insertion and removal with the ability to practice feeding
- Nasoenteric and oesophageal tube care
- Oropharyngeal and nasopharyngeal care
- ET tube care.

The simulator is designed to use size 6 ET and NG tube. Spraypump lubricant, a packet of methyl cellulose, and instruction manual are included. The simulator does not include tracheostomy or NG tube.

68x41x26 cm; 16.5 kg

E

9985-1006058

Cricotracheotomy Trainer

For advanced Trauma Life Support courses. An innovative non biological trainer is the Cricotracheotomy Trainer that simulates the laryngeal body tissue. Use of a simple disposable trachea transforms the trainer into a very effective low cost system. Up to 18 Tracheostomies or 36 Cricothyroidostomies can be performed on a single component. Palpable anatomical presence is achieved with comparatively easy identification of the cricothyroid cartilage and the thyroid cartilage. Responsive incision making. Effective alternative to use of animal tissue. Supported in a strong and immovable base. Scalpel is not included in scope of delivery.

45x15x36 cm; 3.0 kg

Tracheotomy Care Simulator

This simulator replicates an adult male containing oral and nasal passages and all appropriate anatomy such as pharynx, epiglottis, trachea, oesophagus, stoma, cricoid cartilage, representative cervical vertebrae, left and right bronchi and the bronchial tree. The oesophagus dead ends 5 cm below the tracheal opening. A perfect aid to practice oral, nasopharyngeal, nasotracheal and tracheal suctioning, proper cuff inflation, as well as cleaning of the stoma area and changing dressings or ties. An observation window in the neck allows sight of the suction and trachea tube. From the bottom of the simulator one can visually verify the location of a suction catheter in the right bronchus (seen) or left bronchus (unseen). Tracheotomy tube is not included. Delivered with lubricant and carrying case. 53x28x53 cm; 11.0 kg

Catheterisation Simulator, Male

This simulator consists of a male abdomen and allows you to feel the pressure and resistance caused by the mucosal folds, bulbous urethra and the internal urethral sphincter, just prior to the entrance into the bladder. When the catheter enters the bladder, artificial urine (water) will flow through the catheter. Proper positioning and movement of the penis during the catheterisation can be easily practiced. Supplied with catheter, lubricant and transport case.

43x25x30.5 cm; 6.0 kg

9985-1005587

9985-1005587

Enema Administration Simulator

All aspects of the simulator are lifelike in every detail. The upper buttock is flexible so that the trainee must raise the buttock in order to locate and make insertion into the anus. Portable and easy to keep clean, the simulator features a 1 litre fluid reservoir which is adequate for most demonstration and practice purposes. For large groups, a drainage tube is provided so that the fluid can be drained directly into a large container or sink for continuous use. Includes a hard carrying case and enema administration set.

Catheterisation Trainers for Clinical Skills

These fantastic catheterisation trainers have been developed to practice catheterisation on an very realistic model. It does not loose liquid after the training.

- Floppy and soft to touch
- Palpation of the pubic symphysis is clearly identified
- Inserting a suprapubic catheter is quite straight forward and drainage can follow
- The bladder will hold up to 1.5 pints or 800 ml of liquid and the tummy is palpably soft to touch
- Full instructions and an accessory kit with lubricant gel and a bladder syringe are included
- A small amount of gel on the tip of the catheter will enhance the procedure considerably
- Resistance is felt where one would expect and once passed this point flow is easy to achieve

All trainers come equipped with a coated Foley catheter in an appropriate size (16 CH. for the male, 14 CH for the female), lubricant to aid access and a kidney dish. Rubber catheters are preferable to the use of sylastic materials. 43x22x22 cm; 4.9 kg.

9985-1005569

Decubitus Treatment Simulator

These models of the human sacral region can be fastened on to the body of a student or a training doll like a belt and are made of soft realistic material. The set consists of 4 different "belts" and represent the following stages of decubitus in an extremely realistic fashion:

- Stage I: The epidermis has not yet been torn but redness can be observed
- Stage II: Abrasion, bleeding and effusion can be observed
- Stage III: Healing process of stage IV where the fascia and musculature have been affected
- Stage IV: Decubitus ulcer with visible tissue structures down to the bone.

E/J

9985-1012347

9985-1012347

Seymour II™ Decubitus Treatment Simulator

Redesigned and now made with a new flexible, life like material that permits the application and easy removal of dressings, without leaving an adhesive residue. Still the most comprehensive model of its kind, molded from a 74-year-old patient, looks and feels like the real thing. Displaying the following pressure ulcers* (NPUAP 2007 – National Pressure Ulcer Advisory Panel): Stage I, Stage II, Stage III with undermining, tunneling, subcutaneous fat and slough, deep Stage IV with exposed bones, undermining, tunneling, subcutaneous fat, eschar and slough. Also shown are a suspected DTI (Deep Tissue Injury), unstageable full eschar/slough wound, and a dehisced wound. The Stage III and Stage IV are positioned so that a "bridging" dressing for use with a vacuum assisted closure and negative pressure wound therapy devices can be demonstrated and practiced. This model makes it possible to visualize and understand the differences in wounds. Great care has been taken to colour each wound just as you would see it on a patient. You are able to demonstrate and practise wound cleansing, classification, staging, and assessment, as well as the measurement of wound length, depth, undermining, and tunneling. The positioning of the wounds permits multiple dressings to be demonstrated at the same time.

Stoma Care Training Model I with Case

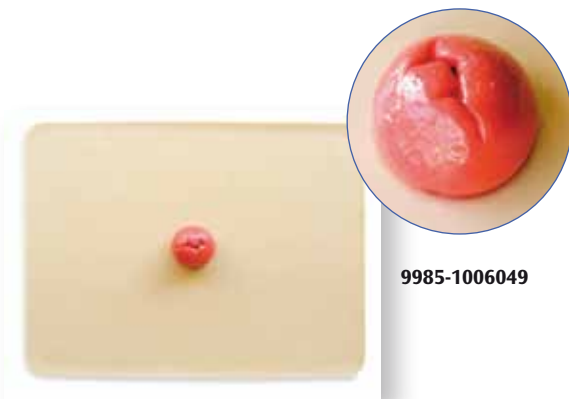

You can feel really the texture of the skin! This adhesive Stoma Care Training Model fits accurately on a patient's stomach, making it possible for both nurse and patient to practise stoma care.

Features of the product:

- Using this model, you can practice stoma care and self care training. You can also use it for educational purposes. For clinical care, this will give patients pre-operation information on how to care for their own stoma.
- The simulated skin is made of special silicone, the touch and appearance of which is quite similar to human abdomen skin.
- The stoma is made of silicon and has a hole in the middle where you can practice the injection and excretion of simulated stools (Simulated Stool (9985-1006051) is available but not included).
- This model sticks comfortably on your skin.
- When it gets dirty or the stickiness becomes ineffective, wash with water and let it dry. This model may be used repeatedly.

Size: 176x245x5 mm
 Weight: 210 g
 Stoma size: 30 dia.x20 mm

9985-1006049

9985-1006049

Ostomy Care Model

This model contains four stomas that can be lubricated and dilated with an inserted finger. Model may be washed, taped, bandaged or fitted with ostomy bags. Supplied with lubricant.

33x46 cm

E

9985-1005570

Male & Female Catheterisation & Ostomy Care Simulator

- Catheterisation: The interchangeable male and female genital organs feature a modular urethral valve to prevent fluid leakage.
- Ostomy care: 3 stomas (transverse colostomy, ileostomy, suprapubic) may be dilated and allow practice of irrigation procedures as well as application of ostomy bags. Each stoma is connected to an internal tank.

Supplied with carrying bag.

50.8x45.7x33 cm; 8.0 kg

E

9985-1005806

Ostomy Care Simulator

Reproduction of an abdomen showing the anatomy of both a colostomy and ileostomy to provide lifelike functions and appearance. Dilation of the stomas can be demonstrated and practiced, along with application of post-operative and permanent ostomy bags. The colostomy can be irrigated. Drainage and excretion at the ileostomy (water) and colostomy (simulated stool) can be pumped by syringes. Delivered with simulated stool and carrying case.

45.5x45.5x30.5 cm; 11.0 kg

E

9985-1005591

Stoma Care Training Model II with Case and Simulated Stool

It's flexible! Easy to wear over your clothing! This model can be put over your clothing with the attached belt. It's great for people who are hesitant to show their stomach in public.

- The hole in the middle will enable you to practice injection for the simulated stool.
- The belt is removeable, allowing placement of the unit directly on the stomach just like 9985-1006049 Stoma Care Training Model I.

Main Unit Size: 145x205x10 mm (Stoma's thickness is 20 mm.)
 Weight: 220 g

Art. No.	Description
9985-1005145	Single Sided Skin Pad, 6x9 cm
9985-1005146	Two Layered Abdominal Bowel, 2x9 cm
9985-1005149	Two Layered Abdominal Bowel, 3x27 cm

Suture Practice Leg

Made with a soft vinyl skin over a core of stitchable foam to provide a life-like suturing experience for students or a realistic suturing demonstration by an instructor. Realistic skin texture with wrinkles and pores. Soft and pliable for easy sewing, the skin is tough enough that sutures will not pull out when tightened. Each unit provides three “wounds”. These “wounds” can be sutured repeatedly until the skin around them is finally worn out; then, new “wounds” can be cut. Although disposable, the trainers provides hundreds of suturing experiences before wearing out. Conservatively, over one hundred cuts can be made on the trainer and each of these cuts can be sutured several times. Suture Practice Leg is complete with a starter suturing kit and instruction booklet.

Bandaging Simulator

This simulator consists of a female torso with flexible, lifelike skin which realistically responds to adhesives and all types of bandaging procedures. 14 different wounds allow one to practice wound management techniques, cleaning and bandaging techniques just like on a real patient. Wound closures feature surgical staples and sutures which cannot be removed. The simulator is supplied in a carrying case and features the following wounds: Thyroidectomy, mid-sternal split with chest tube drains (surgical staples), mastectomy with simulated drain, cholecystectomy with simulated T-tube, laparotomy (surgical staples), appendectomy, colostomy, ileostomy, abdominal hysterectomy (surgical staples), thoractomy (surgical staples), nephrectomy (surgical staples), laminectomy, sacral decubitus ulcer (stage II), leg amputation stump (surgical staples)

84x30.5x63.5 cm; 12.0 kg

E

9985-1005590

Auscultation Trainer and SmartScope™

This simulator allows training of the auscultation of various heart and lung sounds as in a real patient. The instructor can select various conditions by a wireless remote control. When the student has identified the correct auscultation sites by palpating, the heart and lung sounds can be heard by using a special Stethoscope (SmartScope™). The simulator has 6 heart sites and 2 lung sites on the anterior and 16 lung sites on the posterior. One remote control can operate multiple sets of SmartScopes™ (see 9985-1005643) and manikins (see 9985-1005644) simultaneously so that this simulator is also great for group instruction. Remote control works over a range of up to 30 meters. The simulator is supplied in a storage case and comes with one remote control and one SmartScope™ with single and dual user headpieces. Operates using two "AA" and two "AAA" batteries (included). The following sounds can be auscultated:

Heart sounds:

1. Normal
2. Aortic regurgitation
3. Pulmonary stenosis
4. Mitral stenosis
5. Holosystolic
6. Mid-systolic
7. S3 Gallop
8. S4 Gallop
9. Systolic click
10. Atrial septal defect
11. PDA
12. VSD

Lung sounds:

1. Normal tracheal
2. Normal vesicular
3. Wheezes
4. Mono wheeze
5. Fine crackle
6. Coarse crackle
7. Ronchi crackle
8. Stridor
9. Cavernous
10. Bronchovesicular
11. Bronchial
12. Pulmonary edema
13. Infant
14. Friction rub
15. Egophony
16. Pectoriloquy

E/D/S/F/I

9985-1005642

Lower Stump Bandaging Simulator

Most standard bandaging procedures can be practiced or demonstrated. The lower torso is long enough to allow the bandage to be wrapped around the body over the involuntarily hip at the level of the iliac crest. (Note: There is no embedded, palpable skeletal material.) Can be used to demonstrate the attachment of prosthetic devices. The lower torso is representative of a prone patient with legs slightly abducted. One leg is amputated below the knee; the other mid-thigh. Includes an instruction booklet.

Individually boxed.
89x38x25.4 cm; 6.0 kg

E

9985-1005681

Upper Stump Bandaging Simulator

Most standard bandaging procedures can be practiced or demonstrated. Can be used to demonstrate the attachment of prosthetic devices. The upper torso includes the two arms – one is amputated above the elbow; the other above the wrist. Both arms are slightly extended in a "patient-like" position to facilitate bandaging. The compressibility of the material very closely duplicates actual experience with a patient. Includes an instruction booklet. Individually boxed.

66x45.7x33 cm; 7.0 kg

Heart & Breath Sounds Simulator

This hand held device simulates both heart and breath sounds and allows the determination of these by plugging in one of 6 different menus (see 9985-1005885, 9985-1005886, 9985-1005887, 9985-1005888, 9985-1005889 and 9985-1005890), each containing 16 different sounds. The Heart and Breath Sounds Simulator unit includes two external sounders with which students can auscultate the sounds with a stethoscope. Linking additional sounders (see 9985-1005892), up to 15 students can auscultate at the same time. A Loud Speaker may also be connected. Additionally, the unit has a volume control and two LED's that illuminate during systole (heart menu) and expiration (breath menu). Virtually maintenance free, the unit is powered by a 9 volt battery.

E

9985-1005884

Stainless Steel Twin-Head Stethoscope

Excellent hold on skin – optimal sound transmission in the high-frequency range (100 – 1000Hz)– balanced outcomes in low-frequency areas (20 – 100Hz)

Some features of this carefully-worked stethoscope

- A high-precision twin-head chest piece in stainless-steel design
- An ultra-sensitive membrane in the stethoscope head
- Carefully-processed and polished ear clip with an extra-wide diameter
- The PVC rings suppress the cooling effect, bringing increased patient comfort

Greater comfort of application - exactly tuned results in auscultation.

Scope of delivery: A stethoscope with two replacement ear tips, 1 ultra-sensitive membrane, 1 bracket for a name plate

Blood Pressure Simulator Arm with PDA

PDA technology brings you the latest training device for teaching blood pressure skills. Our battery operated blood pressure trainer can also be plugged into any 110V but not 220V AC and comes with the adapter and jack. The PDA is also included, along with the programming and a BP cuff to allow for realistic blood pressure training. This PDA blood pressure training arm features:

- Sphygmomanometer placement
- Palpation of the radial pulse
- Variable systolic a diastolic pressures from 0-300 mm Hg in two mm-increments, variable amplitude of sound heard at the antecubital site
- Sound jack for group listening
- Auscultatory gap setting
- Heart rate settings

This is a great PDA blood pressure arm!

Blood Pressure Arm with External Speaker System, 115/230 V

This arm features an embedded speaker plus an electronic control unit. It allows the instructor to preset any combination of systolic and diastolic pressures and to control the pulse rate and volume level. An auscultatory gap can also be added and the five Korotkoff phases can be audibly discerned. The pressures are activated at release valve by the student and can be read directly from the sphygmomanometer. When using the Blood Pressure Simulator, students are never “approximately” correct – with the preset values they are either right or wrong. The external speaker system allows an entire classroom to auscultate blood pressure sounds, which normally can be heard only by one person via stethoscope. The electronic control unit also features a manual calibration button that allows the unit to be used with any type of sphygmomanometer. The simulator is supplied with the external speaker, the electronic control unit (4 “AA” batteries included), a sphygmomanometer and a hard carrying case. A stethoscope is not included.

Prostate Examination Simulator

This simulator consists of a male abdomen body and 4 different interchangeable prostate glands which can be inserted to allow realistic practice in diagnosis by rectal examination. Supplied with lubricant, cleaner and transport case. The 4 prostate glands represent the following characteristics:

- Benign, slightly enlarged, but otherwise normal
- Beginning stage of carcinoma, a discrete, hard nodule is palpable in the upper right quadrant
- The spread of carcinoma is demonstrated, the small nodule has increased in size and has become an external hard mass on the surface of the gland
- Totally replaced with carcinoma, the entire gland feels hard and irregular

54.5x38x30.5 cm; 11.0 kg

9985-1005163

Prostate Examination Trainer

The trainer is supplied as a four sided box housing 4 prostates: Normal Benign, Enlarged Benign, Early Malignant, Advanced Malignant.

- Realistic tactile sensation
- No prostates need to be replaced
- Each is identified via an access port, using a gloved finger
- Easy to handle

The soft but firm touch of these prostates has been extensively tried and tested by specialist urologists.

E

9985-1005163

9985-1005645

Ear Examination Simulator

This simulator allows practice in the examination of the ear. It consists of a head with 6 interchangeable flexible ears with lifelike external and internal structures. Embedded coloured prints in 5 out of the 6 ears allow the diagnosis of various pathologies. One ear is not coloured, but can be used for earwax removal exercises. The simulator is supplied with 2 tubes of synthetic earwax, nine 35mm slides (5 conditions as below plus 4 conditions as in supplementary set 9985-1005646) and a carry case. An Otoscope is not included. The following normal conditions and pathologies can be observed:

- Normal tympanic membrane
- Mucoïd otitis media
- Serous otitis media with fluid level
- Chronic otitis media with perforation
- Normal tympanic membrane with slanted ear canal

38x38x26 cm; 7.7 kg

9985-1005645

Options and Replacements for 9985-1005645

Supplementary Ears

This set includes 4 ears which allow observation of the following pathologies:

- Chronic otitis media with large perforation
- Attic cholesteatoma (A)
- Attic cholesteatoma (B)
- Atelectatic middle ear otitis and tympanosclerosis

Infant Arterial Training Arm

Lifelike reproduction of an infant arm allows students to master infant radial artery puncture techniques. Includes percutaneous puncture sites in brachial and radial artery. Manual radial artery pulse generator provides realistic arterial pressure. Simulated blood may be infused for backflow in syringe.

1.4 kg

9985-1005241

9985-1005241

Infant IO Leg

Lifelike reproduction of infant leg allows students to master infant intraosseous infusion techniques. Simulated tibia and anatomical landmarks at the tibial tuberosity and medial malleolus. Fluid may be infused for realistic flashback. Drain in heel connects to reservoir bag.

1.4 kg

9985-1005240

9985-1005240

Arterial Stick Exercises and Injection Arm, 115/230 V

This right arm combines all features required for arterial stick exercises, i.v., i.m. and subcutaneous injection and infusion training as well as blood collection exercises:

- Arterial stick exercises: Arterial pulses are automatically generated at the radial and brachial locations with a peristaltic pump. AV anastomosis for simulation of haemodialysis
- I.v. injection in venous network of arm and hand. A pressure bulb allows to increase or decrease venous pressure
- I.m. injection in deltoid area
- Subcutaneous injection areas on the volar side of the forearm and the lateral side of the arm
- Incisions and suturing exercises can be practiced on a special pad. Supplied with artificial blood, blood dispensing bag, funnel, talcum powder, replacement skin, base and carrying bag.

NEW

Infant Venous Access Simulator

Now 100% latex-free with redesigned umbilicus and umbilical valve. A unique, anatomically correct representation of a 1,8 kg and 40,6 cm female baby developed to teach and practice the vascular accessing of newborns and infants. There are barely discernable blue veins under the replaceable translucent “skins” on the head, right and left arms and the right leg. Veins are now made with latex-free Dermalike™ with 50% less needle drag when accessing and improved tear resistance to permit a greater number of needle “sticks”. The veins presented include the temporal, external jugular, post-auricular, basilic, cephalic, saphenous and popliteal. When accessing a “pop” is felt as the needle enters the vein followed by a realistic flashback of simulated blood confirming proper needle placement. The veins were specifically designed to have a small internal diameter, as you would find on a small baby. You can practice accessing, securing, dressing, site care, and maintenance for standard IVs and PICC (Peripherally Inserted Central Catheter). A redesigned umbilicus and umbilical valve allows repeated catheterization with a 5FR umbilical catheter with proper placement verified by a blood return. Nasal and oral openings allow placement of nasal cannulas, as well as endotracheal, nasogastric, and feeding tubes to teach suctioning, securing, dressing, cleansing, and maintenance.

IV Torso

The IV Torso allows practicing of intravenous access techniques. The IV Torso has been specifically designed to meet the key educational goals of training programs.

Product benefits:

- Enables students to experience realistic procedures
- Areas for IV access are simulated by soft pads. These are covered by a realistic skin, which simulates the feel of human skin as closely as possible
- The simulated veins inside the pads provide a natural resistance during puncture and a natural flashback of blood
- When the needle is withdrawn, both veins and skin will self seal so that the site of puncture is not visible to the next student
- No setup for instructors as pads are pre-filled with simulated blood
- The IV Torso comes with a carry case for easy transportation and storage

Product features:

- The IV Torso enables the practice of IV access to the:
 - External jugular vein
 - Internal jugular vein via the anterior, central and posterior approach
 - Subclavian vein
 - Femoral vein
- A pulse bulb enables the instructor to create a palpable pulse in the manikin's arteries
- Long catheters can be placed into the training model
- Realistic tissue simulation
- Both Neck Pad and Femoral Pad are replaceable
- Pads can be replaced without use of any tools

Central Venous Cannulation Simulator

This simulator allows the practice of CVC technique and is designed for the emergency medical field as well as those participating in ACLS and ATLS programs. Anatomically accurate, palpation is exactly the same as on a patient. The sternal notch which "sinks" when palpated, sternocleidomastoid, clavicle and other supporting features can be felt. Internal blood vessels include subclavian vein, internal jugular vein, external jugular vein and carotid artery. The use of a Swan-Ganz catheter is possible. The neck of the simulator is positioned to the left, making visible landmark identification easy. Delivered with removable skin, tubing sealant, needles, artificial blood and carrying case.

NEW

Chester Chest™ – With a New, More Advanced Arm

Chester Chest™ is an unequalled teaching aid which makes it possible to learn how to use the following long term vascular accesses perfectly:

- Implanted Port
- Central Venous Catheter (CVC)
- Peripherally Inserted Central Catheter (PICC)

The new, more advanced arm has a double lumen 5FR-PICC (Peripherally Inserted Central Catheter), which comes out of the V. basilica – the preferred access. In the area of the PICC catheter there is a cavity for inserting a peripheral port (this port is pictured but is not included with the delivery). A further feature of the new arm is a 20G IV catheter in the lower arm. The new, more advanced arm has greater rotation and extension than the previous model and can be used for practising cleaning, applying bandages and fixings, as well as inserting and removing IVs. The right side of the chest has been equipped with a surgically placed CVC (central venous catheter). Furthermore, catheters can be inserted into the V. jugularis externa and into the V. subclavia via the openings provided. The left side of the chest has an implanted port. Using the various tissue flaps provided, difficult insertions can be practised: deep, slanted, slipped or wandering ports. Chester Chest™ can be used in a upright or horizontal position. It is delivered with a blood reservoir bag, talcum powder and instructions for use.

I.v. Injection Arm

This injection arm, made of 3B SKINlike™ silicone, is unique in quality and design and allows realistic training to teach competence to medical staff. It is also very suitable for group instruction because of its high quality, stain resistance and easy-to-clean soft material. It is ideal for practicing:

- Intravenous injections
- Correct puncture of peripheral veins for blood sampling. The following veins can be punctured: basilic vein, cephalic vein, median cubital vein, dorsal venous rete of hand
- Positioning of a butterfly cannula

Delivered with stand, artificial blood, 2 replacement tubing systems, plastic bottle, syringe and deluxe storage carton.

Advanced Venipuncture and Injection Arm, white skin tone

This revolutionary training arm provides complete venous access for IV therapy and phlebotomy, plus sites for intramuscular and intradermal injections. An extensive 8-line vascular system allows students to practice venipuncture at all primary and secondary locations, including starting IVs and introducing Over the Needle IV Catheters. The venous system simplifies setup with only one external fluid bag supplying artificial blood to all veins simultaneously. The dorsal surface of the hand includes injectable metacarpal, digital and thumb veins. Venipuncture can be performed along the basilic, cephalic, accessory cephalic, and median antebrachial veins. Intramuscular injections may be performed in the deltoid muscle and intradermal injection sites are located in the upper arm. Intramuscular injections into the deltoid muscle are enhanced by the soft, lifelike skin and by the natural bony landmarks in the region. Intradermal injections using distilled water will create characteristic skin welts at designated sites on the upper arm. The soft, flexible fingers are molded separately with close attention paid to every detail – right down to the fingerprints! Flexion of the wrist helps students develop manipulation skills. The replaceable skin rolls as the veins are palpated, and a discernable “pop” is felt when entering the veins. Valves in the veins can be seen and palpated on the skin surface. Under normal use, hundreds of injections may be performed before the veins or skins need to be replaced. Complete replacement kits are available and easy to use.

Delivered with artificial blood, 3cc syringe, 12 cc syringe, needle, two fluid bags, instruction manual and carrying case.

9985-1005809

9985-1005809

Intramuscular Injection Simulator

This high quality simulator represents a left upper arm with all important anatomical palpable landmarks such as acromion and humerus. It allows practice of correct intramuscular and subcutaneous injections in an exceptionally accurate way. The built in fine electronics produce audio visual feedback of the result, e.g. correct or incorrect injection or bone contact or incorrect localization. Additional training and control modes provide either an immediate or later performance check under training conditions. The lifelike silicone skin is extremely durable and can be quickly and easily exchanged when necessary. The simulator is supplied with 2 AA batteries, detailed instruction manual, replacement skin, 5 ml syringe and 21G/0.8 injection needle.

9985-1000514

Two-in-One i.m. Injection Model of Buttock

This unique model of an human buttock has a special two-in-one function: On the right hand side, the anatomy of the bones, ilium crista, greater trochanter, m. gluteus medius, nerves and veins can be studied through the transparent outer structure. The student can transfer what he has learned about the position of nerves, veins etc. to the left hand side on which intramuscular injections can be practiced. Anatomical landmarks can be palpated through the soft skin to identify the correct positions for injection. The injection of fluid (water) is possible. Correct injections are confirmed by a green light, if the injection is placed in a wrong position or too deep, a red light will appear and a buzzer will sound.

38x35x22 cm; 5 kg

E/J

9985-1005394

9985-1005394

I.m. Injection Simulator

This simulator consists of an accurately modelled buttock with thighs to allow intramuscular injection by finding the correct injection region and needle insertion angle. The skin and muscle texture feel very lifelike, palpable anatomical landmarks such as the superior end of the femur (greater trochanter), posterior and anterior superior iliac spines and the sacrum can be felt. A section of the upper lateral quadrant of the left gluteal area is cut away to show the underlying structures. Clearly shown are the gluteus medius and gluteus maximus muscles, sciatic nerve and vascular structures. With this simulator you can practice gluteus medius, ventrogluteal and vastus lateralis injections. Supplied with syringes and carrying case.

Buttockmate – i.m. Injection Simulator

This easy to handle simulator of a human buttock can be fastened like a belt on the body of a student or a training doll. It allows practicing of intramuscular injections and also the injection of fluid (water) is possible. If the injected part is incorrect, a buzzer, which works with a 9 volt battery and a red light, will give a warning sound. The durable, soft and very realistic skin shows no needle marks even after many exercises.

14x34.5x49.5 cm

E/J

9985-1005395

9985-1005395

Spinal Injection Simulator

This accurate replica of the lower back with spinal column and spinal cord insert ensures proper resistance in needle puncture and accurate palpation of reference points. The simulator allows one to practice spinal, epidural, caudal, sacral and lumbar injection techniques. The spinal column can be charged with fluid to simulate the liquor cerebrospinalis and the simulator can be placed in a sitting or lateral position. The functional portion of the simulator includes L3-L5 vertebrae (L1 and L2 section are visible) plus the sacrum and coccyx. Supplied with fluid bottle, connectors and carrying case.

48x44.5x26.5 cm; 12.0 kg

9985-1005153

Lumbar Epidural Injection Trainer

The Trainer is designed to help trainee anaesthetists acquire the necessary tactile skills for epidural anaesthesia prior to hands-on patient experience. If the epidural needle is inserted too deeply a slight resistance is felt before the needle penetrates the dura. Features found in the trainer include:

- Tactile and visual access to the lumbar spine, the epidural space and the dural sac
- Can be positioned in lying or lateral recumbent position
- Spinous processes and the interspinous spaces are palpable beneath the skin
- Epidural injection is carried out using either air or saline to detect loss of resistance and if accidental dural puncture occurs, "cerebrospinal fluid" will appear.
- Can be easily dissembled at any time to show position of needle during penetration
- Consists of skin, muscle layer, ligamentum flavum, vertebral bones and intra-spinal ligament
- Supplied with an all metal Tuohy needle and a loss of resistance syringe 27x210x110 cm

Advanced Child Airway Management Trainer

Present your students with the challenges they may face in the real world. Advanced Child Airway Management Trainers offer tongue swelling and laryngospasm. This advanced airway management trainer is perfect for practicing skills on paediatric patients and represents the size of an 8 year old patient. Practice intubation, ventilation, suction, and jaw thrust techniques. Realistic anatomy and landmarks include teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false and true vocal cords, trachea, lungs, oesophagus, and stomach. The trainer allows you to practice oral, digital, and nasal intubation, as well as E.T. (Endotracheal Tube), E.O.A. (Oesophageal Obturator Airway), P.T.L. (Pharyngeal Tracheal Lumen), L.M.A. (Laryngeal Mask Airway), E.G.T.A. (Oesophageal Gastric Tube Airway), and Combitube® insertion. Separate lungs for auscultation. Inflatable stomach bladder indicates oesophageal insufflation. With its slightly anterior position, swelling tongue, and vocal cords, the Advanced Child Airway Management Trainer is a great trainer for introductory as well as advanced training. Includes training stand to mount head, pump spray lubricant and hard carrying case.

E

9985-1005698

9985-1005633

Intubation Head

This trainer simulates a non anaesthetised patient and features anatomical landmarks such as: teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false cords, true vocal cords, trachea, lungs, oesophagus, cricoid cartilage and stomach. Supplied with stand, pump spray lubricant and hard carrying case. The following airway management procedures can be trained:

- Intubation (oral, digital and nasal)
- E.T. (Endotracheal Training)
- E.O.A. (Oesophageal Oral Airway)
- P.T.L. (Pharyngeal Tracheal Lumen)
- Combitube® insertion
- Ventilation and suction techniques
- Proper cuff inflation
- Sellick manoeuvre (applying cricoid pressure changes the position of the trachea and closes the oesophagus)

63x30.5x40.6 cm; 15 kg

Intubation Trainer™

The Intubation Trainer™ is the ideal tool for physicians, paramedics, nurses, lung specialists and other medical professionals to train endotracheal intubations.

The product comes with a standard USB port and is compatible with the operating systems Windows 98, 2000, ME and XP.

Benefits of the Intubation Trainer™:

- See and understand the anatomy of the upper airways
- Learn the correct positioning of the tube in the trachea and correct handling of the laryngoscope
- Real time feedback of eye-hand coordination
- Procedure recording capability improves inclusion of the whole study group during a session

The Intubation Trainer™ can be used with our following models:

9985-1005396, 9985-1005649, 9985-1005633, 9985-1005214, 9985-1005827

Supplied with: case, software, driver, instructions, camera.

E

9985-1005325

9985-1005396

Endotracheal Intubation Simulator

In securing an airway, endotracheal intubation requires the highest skills and is accompanied by risks. To enable you as emergency medical staff to perform intubations, you should certainly use every opportunity to practice. This intubation simulator provides exceptionally good and realistic intubation training, enabling you to:

- Acquire both the skill of oral and nasal tracheal intubation
- Acquire the skill of handling supraglottic airway devices (e.g. laryngeal mask airway, oesophageal gastric tube airway)
- Confirm left and right air sound with a stethoscope
- Determine ventilation of one lung
- Determine accidental oesophageal intubation
- Usage of the laryngoscope and training of securing airways can be trained almost like on a living body.
- Neck flexion and head extension
- Advancement of the mandible

Tongue, epiglottis and pharynx are reproduced realistically, with the tongue and mouth made of soft material. The front teeth (upper four) are made to break when pressure is exerted incorrectly and the teeth are used as a fulcrum while using a laryngoscope. Determining incorrect intubation is possible! When intubation and ventilation were carried out correctly, this is shown by simultaneous rising of the left and right chest. When only one lung is ventilated, the error is shown in that only one side will rise. When the tracheal tube has been mistakenly intubated into the oesophagus and air is sent, the abdomen will rise (stomach inflation), making it possible to determine the error. Parts of the model are purposefully made to be damaged if handled roughly. Accessories: 3 teeth, silicone oil, carrying case. Ventilation bag, tube, stethoscope and laryngoscope are not included in scope of delivery. 75x45x24 cm; 6.2 kg

E

9985-1005396

9985-1005214

Airway Management Trainer

Realistic practice is the key to developing proficiency in airway management skills. The Airway Management Trainer's lifelike upper torso and head simulates real world complications when practising a variety of intubation, ventilation and suction techniques.

- Realistic anatomical features allow demonstration of Sellick Manoeuvre and laryngospasm
 - Practical training in clearing an obstructed airway and suctioning of liquid foreign matter
 - Provides visual inspection of lung expansion and auscultation of breath sounds
 - Simulates stomach inflation and vomiting situation
 - Airway demonstration model is standard with each trainer
 - Can be used with trachlight products
 - Improved airway allows insertion of laryngeal mask airway and combitube
- Includes: Manikin on sturdy board, airway demonstration model, cleaning kit, lubricant, carry case, and directions for use. 75x27x45 cm; 15 kg

Intubation Torso

This upper torso features:

- Realistic chest cavity with trachea, bronchi and lungs, heart and stomach
- Nominal 18 mm airway
- Anatomically accurate mouth, tongue, airway and oesophagus
- Fully articulating head, neck and jaw
- Wide, straight, stiffer epiglottis and realistic vocal cords
- Soft neck with cricocartilage

The following airway management procedures can be performed:

- Head tilt /chin lift, jaw thrust and neck extension into the sniffing position
- Placement of cuffed ET tubes and EOA (Oesophagus Obturator Airway)
- Intubation (oral, digital, nasal)
- Sellick manoeuvre
- Observation of unilateral or bilateral lung expansion under positive pressure ventilation
- Surgical placement of tracheotomy tube
- Emergency needle cricothyrotomy stick
- Bilateral tension pneumothorax decompression

Supplied with 6 neck collars, 3 cricocartilages, membrane tape and carrying bag. Laryngoscope and tube are not included in scope of delivery.

76x56x30.5 cm; 11.4 kg

9985-1005827

9985-1005774

Adult Airway Management Trainer

Detailed anatomy featured on the adult intubation trainer stands out. Get a clear picture of human anatomy from the sculpted alveolar sac, bronchial tree, and blood vessel structures of the cross sectioned and exposed flexible lungs, to the interior main bronchus and oral / nasal pharyngeal spaces. Combine these details with an airway complicated by breakout teeth, tongue oedema, and laryngospasm, and this airway trainer rates hard. An anatomical stomach that swells with oesophageal intubation, or excessive pressure with the BVM during rescue breathing, together with the vomiting capability of this manikin makes this an exceptional educational tool for multitasking. Includes instructions for use, soft carry bag, lubricant and replaceable lungs and stomach.

84x64x30 cm; 20 kg

E

9985-1005774

9985-1005780

Economy Adult Airway Management Trainer

This detailed adult intubation head comes mounted for clinical teaching and practice of advanced airway management. Intubation procedures and skills, including anatomy knowledge and recognition, endotracheal intubation, nasotracheal intubation, use of field emergency airway adjunct tubes like LMAs and Combitube, securing, and suctioning, and maintenance of the installation can all be practiced with this unit. A soft carry bag, lubricant, and instructions for use are included. Without tube.

Suture Practice Leg

Made with a soft vinyl skin over a core of stitchable foam to provide a life like suturing experience for students or a realistic suturing demonstration by an instructor. Realistic skin texture with wrinkles and pores. Soft and pliable for easy sewing, the skin is tough enough that sutures will not pull out when tightened. Each unit provides three "wounds". These "wounds" can be sutured repeatedly until the skin around them is finally worn out; then, new "wounds" can be cut. Although disposable, the trainers provides hundreds of suturing experiences before wearing out. Conservatively, over one hundred cuts can be made on the trainer and each of these cuts can be sutured several times. Suture Practice Leg is complete with a starter suturing kit and instruction booklet.

2.0 kg

E

9985-1005683

Suture Practice Arm

This arm is made of a soft vinyl skin over a foam allowing hundreds of suture practice sessions. The arm comes with 3 wounds, as well as several cuts which can be placed all over the arm, hand and fingers and sutured several times. The soft and pliable material guarantees the sutures will not pull out when tightened. Delivered with a starter suturing kit. Like 9985-1005683. 62x18x13 cm; ca. 1.0 kg

Surgery and Laparoscopy Torso

This trainer is aimed at all levels of surgeons in training whose surgical skills require extra practice. Once set up, the torso can be used to self educate using his / her preferred surgical laparoscopic instrumentation for a variety of techniques. The Torso has the following features:

- Can insufflate and maintain air tight pressure
- Supports usage of wet tissue or prepared artificial materials
- Can be used for surgical diathermy. There is a fixed metal plate in the base of the unit with a connection on the outside to enable earthing
- Can be easily cleaned by flushing out through a large airtight drain plug
- Is light weight and has a carrying handle

75x55x22.5 cm

E

9985-1005135

Skin Suture Trainer

A great low cost way to practice surgical opening and closing techniques.

Features:

- Economical reversible pad
- The material has been designed to make complex incisions such as “flap and dog turn” suturing more realistic
- A sub-dermal layer is present so that it is possible to make secure intra-dermal sutures
- Base has suction feet to enable slip free use

11x14 cm

E

9985-1005134

Laparoscopic Trainer

The Portable Laparoscopic Trainer is designed to provide low cost assistance in laparoscopic training.

- Supplied with 4mm black Neoprene skin
- Simple to assemble and ready for use in seconds
- Works with wet tissue (eg. Pig liver) or dry (eg. foam)

Chest Drain Simulator

FOR ADVANCED TRAUMA LIFESUPPORT COURSES

This innovative design not only simulates realistic body tissue but provides an alternative to the use of animals. The design is unique in having a replaceable chest wall with ribs that are encased into the realistic simulated flesh that forms the torso. This fleshy part is replaceable and can be used for up to 25 incisions. It is housed in a white plastic torso-shaped box that is firmly secured and has strong sucker-feet to ensure non slip use on smooth table-top surfaces. The torso presents as a patient lying on his back.

- Surgical access is lateral to the pectoralis major
- The arm has been removed for easier access and extended for anatomical relevance
- The ribs can be clearly felt below the surface of the skin
- Trainees can make an incision through the fleshy part, surgically dividing the tissue with blunt forceps until the plural cavity is clearly felt by finger insertion
- Complete finger rotation is possible, allowing the trainee to ensure that there are no obstructions before a drainage system can be introduced
- The popping effect of passing through the pleura is realistic and a unique feature
- A drain can be securely sutured into position onto this simulated flesh
- The trainer needs no preparation, no refrigeration, no messy disposal after use and no unpleasant odours

Trainer includes a replaceable:

- Chest wall
- Pericardiocentesis where fluid can be drawn into a syringe
- A realistic Tension Pneumothorax where air can clearly be heard and felt exhaling between the 2nd and 3rd ribs

Infant Choking Manikin

This 9 month old baby brings to you the challenges associated with foreign body obstruction in the young paediatric age group. By placing the included obstruction in the pharyngeal cavity, you will occlude the throat and initialize the need for protocol manoeuvres to remove the object. When proper hand placement occurs with sufficient force, the object expels from the mouth. Includes two objects, clothes and carrying bag.

Little Junior

Developed to provide a low cost alternative for effective child CPR training without compromising realism. Little Junior continues in the same tradition as the popular Little Anne and Baby Anne manikins.

- Airway can be opened using head tilt/chin lift and/or jaw thrust technique
- Compression “clicker” provides audible confirmation of adequate compression depth
- Economical, disposable airways for quick and easy clean up
- Removable, reusable faces

Single Pack includes 1 manikin, 1 soft pack/training mat, 2 faces, 2 airways, 1 bottle of high level manikin disinfectant and directions for use. 58x26x21 cm; 2.8 kg

Child CPR Torso

This economical CPR torso uses a single-use airway/lung/face shield system which requires no cleaning, no disinfecting and no disassembly. Features include:

- Realistic chest rise
- Anatomical landmarks such as sternum, ribcage and sub-sternal notch

E

9985-1005752

Adult Choking Torso

This life size torso allows practice of abdominal/chest thrust back blow procedures (Heimlich manoeuvre) and mouth sweep for clearing a blocked airway. When correct procedures are performed, the manikin will expel the object causing the obstruction.

Features include: Anatomical landmarks such as ribcage, xiphoid process and jugular notch. Supplied with choking objects, shirt and soft carrying bag.

Little Anne®

The Little Anne® manikin is a realistic, inexpensive, and lightweight adult CPR trainer with all the essential features for adult CPR learning.

Product features:

- Oral and nasal passages allow realistic nose pinch required for mouth-to-nose ventilation
- Natural obstruction of the airway allows students to learn the important technique of opening the airway
- Head tilt/ chin lift and jaw thrust allow students to correctly practice all manoeuvres necessary when resuscitating a real victim
- Realistic airway function means that the airway remains obstructed without proper head tilt/ chin lift or jaw thrust. Chest rise is seen with correct ventilations
- Anatomically correct landmarks and sternal notch allow the student to practice identification of all anatomical landmarks relevant to adult CPR
- Audible feedback reinforces correct compression depth. An optional "clicker" feature signals the correct compression depth
- Realistic chest compression resistance allows the students to experience the amount of pressure needed to perform proper chest compressions in a real life situation
- Economical disposable airways for quick and easy clean-up
- Removable and reusable faces for convenient and affordable maintenance

9985-1005269

Resusci Anne CPR Torso

Simulates an adult of average physiology, and is designed for realistic training of basic life support techniques in accordance with international recommendations. Features included in the manikin are:

- Natural obstruction of the airway
- Movable jaw
- Sanitary one-way valve membrane and non-rebreathing valve
- Human like compliance for inflations and compressions
- Chest rise with inflations
- Realistic landmarks for compression point location
- Carotid pulse, manual
- Use of ventilation mask or manual bag valve mask resuscitator can be practiced

Supplied with 4 face masks, 3 airways, soft transport bag/training mat, jacket, disinfectant.
73x27x39 cm; 10 kg

Resusci Anne CPR Torso with Skill Reporter and Hard Case

Same features as 9985-1005191. In addition:
Skill Reporter (Combined light signal box with printer in English language) is powered by eight 1.5 V alkaline batteries (size D) and shows CPR performance as:

- Inflation volume (insufficient/sufficient/ excessive)
- Compression depth (insufficient/sufficient/excessive)
- Wrong hand position (sides and upper part/lower centre)
- Too fast inflation
- Prints both real-time curves and statistical report of CPR performance
- Includes metronome providing a rate of 80 or 100 strokes/minute
- Allows to change between AHA (American Heart Association) and ERC (European Resuscitation Council) resuscitation guidelines
- Capability of logging CPR intervention sequence without Skill Reporter connected (for scenario-based training)
- Sensors indicate also if responsiveness and pulse were checked and if the head was tilted and the chin was lifted before artificial respiration.

Supplied with 4 face masks, 3 airways, carrying case, jacket, disinfectant.

Corpulent Manikin

Students always wonder how CPR manikins will compare with real victims, especially those who are older or obese. This unique manikin helps to prepare students to respond to a more typical cardiac arrest event with a victim who is elderly and overweight. Features: elderly physical appearance, large body type with extra "fat" layer, realistic head tilt and chin lift for opening the airway, and palpable and visual anatomical landmarks, including the sternum, rib cage, and substernal notch. The airway can be manipulated to simulate airway obstruction or choking situations. Also includes three mouth/nose pieces, three disposable lung/airway systems, and a convenient carrying bag.

CPR Torso

This economical torso is made of soft, realistic vinyl plastic over polyurethane foam. Features include:

- Long torso for realistic abdominal thrusts
- Realistic head tilt and chin lift for opening airway
- Anatomical landmarks such as sternum, ribcage and sub-sternal notch
- Airway can be easily manipulated to simulate airway obstruction or choking situations
- Supplied with 3 disposable lung/airway systems, 3 mouth/nose pieces and nylon carrying bag with kneeling pads

65x38x22 cm; 4.8 kg

E

9985-1005753

Pocket Mask

The Pocket Mask CPR barrier combines a low resistance one-way valve and disposable 3M™ Filtrete™ hydrophobic filter to afford superior protection to rescuers while providing life-saving ventilations to patients.

- Pre-inflated cuff allows for ease of application and makes effective seal
- Distance from patient allows rescuer to see chest rise and fall
- Versions with latex free & powder-free nitrile gloves and anti-microbial wipe help maximize user protection
- Can be used in CPR instruction courses to teach mouth-to-barrier rescue breathing
- Replaceable, disposable one-way valve and filter
- Latex free

Brad™ Compact CPR Training Manikin with Electronics

This economical CPR manikin is constructed of soft, realistic vinyl plastic over polyurethane foam for a "human" feel.

Features include:

- longer torso for realistic abdominal thrusts
- realistic head tilt and chin lift for opening airway
- can easily be manipulated to realistically simulate airway obstruction or choking situations
- a user friendly lung/airway design that eliminates cleaning.

Includes three mouth/nose pieces and three disposable lung/airway systems. Comes with an exterior console box that indicates proper hand position, adequate chest compressions, and adequate air volume Nylon carrying bag and kneeling pads included.

Size: 28" x 18" x 10".

9985-1005637

Low Budget CPR Torso

An inexpensive manikin designed for teaching individuals or large groups the life-saving techniques of CPR.

The one-piece, disposable lung /mouth protection bags make this manikin completely sanitary. The airway opens using the head tilt /chin lift method and there is a visible chest rise when ventilated. The xiphoid process provides an anatomical reference point for hand placement and compressions. The manikin also features both adult and child capabilities.

Comes with 10 lung mouth protection bags.

E

9985-1005637

Low Budget CPR Torso, 10-Pack

The pack includes 10 manikins, 100 lung /mouth protection bags and 2 carrying bags.

All other features same as 9985-1005637.

9985-1005635

Low Budget CPR Torso, 5-Pack

The pack includes 5 manikins, 50 lung /mouth protection bags and 1 carrying bag.

All other features same as 9985-1005637.

9985-1005636

CPR Torso with Light Controller

This easy to transport torso allows the practice of adult CPR techniques. Optionally child CPR can also be practiced by changing the supplied springs inside the torso. Individual student face masks with a one way non rebreathing valve and disposable airways provide maximum protection against cross contamination. Supplied with a washable jogging suit, child springs, 10 disposable lower airways, 10 disposable tracheal airways, five sanitary face masks and a carrying case. Features include:

- Palpable anatomical landmarks (xiphoid, navel, nipples and rib cage)
- Adult CPR training with optional child springs
- Fully articulated head, neck and jaw
- Palpable carotid pulse

The light controller allows the following CPR evaluation:

- Adult/child mode
- Proper compression depth (yellow light)
- Proper ventilation volume (green light)
- Improper hand placement (red light)

Includes 4 "D" batteries.
48.5x30.5x80 cm; 17.0 kg

E

9985-1005618

Adult

CPR Manikin with Printer Unit

This full size manikin allows the practice of adult CPR techniques. Same features as 9985-1005618 (see page 152). The printer unit allows CPR evaluation. The performance of each skill is displayed separately while averages are stored in the memory. Compression and ventilation waveforms are plotted in a time sequence. Averages are shown on the display and printed on paper. (4 pens, 3 rolls of paper and 6 "D" batteries are included).

Evaluation includes:

- Adult/child mode
- Compression rate
- Proper compression depth (yellow light)
- Ventilation duration
- Proper ventilation volume (green light)
- Incorrect hand placement (red light)

- Suitable for blood sampling or fluid injection
- Supplied with artificial blood

9985-1005749

9985-1005741

Trauma Moulage Kit

The kit contains a big variety of bleeding and non-bleeding wounds.

A perfect kit to be added to a manikin. Bleeding wounds (complete with reservoir bags with pump assembly):

- 1 sucking wound of chest
- 1 laceration of the forearm
- 1 broken clavicle with seat belt contusion
- 1 projectile entry & exit of arm
- 1 impalement of lower leg
- 1 crushed foot
- 1 jaw wound (manikin use only)
- 1 laceration of the forehead (manikin use only)
- 1 compound fracture of humerus
- 1 compound fracture of femur
- 1 compound fracture of tibia
- 1 abdominal wound with protruding intestines
- 1 pkg. blood powder for 4.5 litre simulated blood

Non-bleeding wounds:

- Burn of the chest, burn of the back, burn of the hand and 2nd and 3rd degree burn of the forearm
- 1 burn of face (manikin use only)

9985-1005712

STAT Baby – Training for Life

Realism in paediatric training no longer crawls at old technology rates. STAT Baby brings you the most lifelike simulator for infant care by utilizing new materials for tactile awareness during patient assessment. Developed in conjunction with leading paediatric physician involvement, this baby contains a wide range of skill sets in a simple format that is affordable to all. It has the size of a nine month old baby, weighs 7 kg and has the following characteristics:

- IO leg
- Peripheral IV (left hand and foot)
- IM left deltoid and thigh and SC injection sites
- PICC line
- ET tube insertion
- Laryngeal spasm
- Tongue oedema
- LMA insertion
- Trach care
- NG tube placement with fluid reservoir
- Feeding tube care
- Rectal medication
- Pulses (6 pulse locations – 2 brachial, 2 femoral, 2 carotid)
- Defib (shock level 2-4 joules per kg)
- Foley cath insertion (female manikin)
- Pneumothorax

The Stat Baby is supplied with accessories that include IV vein kit (1 arm and 1 leg), leg skin (1), arm skin (1), IO leg bones (12), pneumothorax sites (4), injection site (2), Picc line site (1), reservoir bag (4), defibrillator adapters, ECG interactive simulator, and simulated blood powder (1).

Advanced Child Airway Management Trainer

Present your students with the challenges they may face in the real world. Advanced Child Airway Management Trainers offer tongue swelling and laryngospasm. This advanced airway management trainer is perfect for practicing skills on paediatric patients and represents the size of an 8-year-old patient. Practice intubation, ventilation, suction, and jaw thrust techniques. Realistic anatomy and landmarks include teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false and true vocal cords, trachea, lungs, oesophagus, and stomach. The trainer allows you to practice oral, digital, and nasal intubation, as well as E.T. (Endotracheal Tube), E.O.A. (Oesophageal Obturator Airway), P.T.L. (Pharyngeal Tracheal Lumen), L.M.A. (Laryngeal Mask Airway), E.G.T.A. (Oesophageal Gastric Tube Airway), and Combitube® insertion. Separate lungs for auscultation. Inflatable stomach bladder indicates oesophageal insufflation. With its slightly anterior position, swelling tongue, and vocal cords, the Advanced Child Airway Management Trainer is a great trainer for introductory as well as advanced training. Includes training stand to mount head, pump spray lubricant, and hard carrying case.

9985-1005698

9985-1005200

PALS Baby with ECG-Simulator

Simulates a 3 month old infant and allows realistic training of skills required for ACLS of infants including:

- CPR (Ventilation via bag-valve-mask)
- Endotracheal and nasotracheal intubation
- Practice of Sellick maneuver
- Auscultation of breath sounds
- Bilateral chest movement and stomach distension
- Oral/Nasal Airways
- Oral/Nasal Gastric Tube Insertion
- Intravenous access via scalp vein
- ECG monitoring (with 4 lead ECG) and arrhythmia recognition
- Simulated pulse

„Heartsim 200“ ECG Rhythm Simulator provides basic, modified and paediatric rhythms with variable pulse rate and strength.

- Features:
- A total of 30 rhythms
 - 17 modified rhythms including Torsade de Pointes
 - 7 paediatric rhythms
 - Battery powered

54x35x14 cm; 2.2 kg

PALS Manikin

This dramatic, state of the art training manikin is a complete resuscitation system designed for teaching life saving techniques for infants. Ideal for paediatric advanced life support, nursing, hospital, paramedic, and EMT training at every level. Tactile and visual realism combine to provide students with the most realistic training possible. The Manikin allows practice of 4-lead ECG monitoring, IV therapy, umbilical catheterization, airway management, intraosseous infusion, and CPR! The unique chest skin with an umbilical cord allows practice of proper techniques in umbilical catheterization, including cutting and clamping. Fluid may be aspirated through the umbilicus, making this training manikin incredibly lifelike. An IV arm and leg allow for realistic practice of paediatric venipuncture. The cephalic and basilic veins are accessible on the IV arm, as well as the dorsal venous arch on the hand; the great saphenous veins are accessible on the IV leg, as well as the dorsal venous arch on the foot. An intraosseous infusion leg demonstrates and simulates the intraosseous infusion procedure. Featuring realistic anatomy and size, the airway management head is ideal for practicing airway management skills on an infant. Includes a hard carrying/storage case. Three-year warranty.

Procedures That Can Be Performed:

- CPR:** Palpable and visual landmarks; fully articulated head, neck, and jaw.
- Airway Management:** Realistic anatomy of the mouth, tongue, oral pharynx, larynx, epiglottis, vocal cords, trachea, and oesophagus; oral and digital intubation capabilities; suctioning capabilities.
- IV Arm & Leg:** Smaller lumen tubing simulates the size of an infant's veins; realistic flashback from a pressurized system; replaceable skin and veins.
- ECG/Umbilical Cannulation Skin:** Arrhythmia recognition; learn proper techniques in umbilical catheterization; allows practice of umbilical cannulation, cutting, and clamping; aspirate fluid through the umbilicus
- Intraosseous Infusion:** Palpable landmarks include the patella, tibia, and tibial tuberosity; replaceable bones and skin; pressurized system allows aspiration of fluid.

PALS Manikin with ECG-Simulator

This trainer of a female infant allows the practicing of a wide range of paediatric ALS techniques. Features include:

- Bag valve mask ventilation
 - Oral and nasal intubation including Sellick's manoeuvre
 - Placing of NG tube
 - Three lead ECG monitoring (16 different arrhythmias with adjustable heart rate)
 - Palpation of brachial pulse
 - External chest compressions
 - Movable jaw
 - I.v sites in hand and arm for blood sampling or fluid injection
 - Intraosseous needle insertion and aspiration of bone marrow in both legs
 - Palpation of scalp vein, cranial sutures and fontanelles
- Supplied with carrying bag.

57 cm; 1.6 kg

9985-1005759

Options and Replacements for 9985-1005658

ECG Simulator

With this unit various ECG rhythms can be generated and displayed on an ECG monitor (not included) for diagnostic training. All arrhythmias can be displayed in adult or paediatric mode so that a total of 34 rhythms are available. The unit can be used to upgrade 9985-1005658 and also works separately to practice operating a defibrillator/ external pacer. Simply connect a defibrillator/external pacer to the simulator, defibrillate/pace directly into the simulator and observe ECG rhythms.

- The following 6 different arrhythmias are available for pacer training: Sinus Brady, Junctional Brady, 2nd degree type I A-V block, 2nd degree type II A-V block, 2nd degree type II A-V block with PVCs and 3rd degree A-V block.
- Cardioversion can be simulated by defibrillating the manikin with a manual, semi-automatic, or automatic defibrillator.
- The following 11 arrhythmias are available for defibrillator training: V. Fib, V. Tach (fast), V. Tach (slow), V. Tach (polymorphic), A. Fib, A. Flutter, SVT, Sinus Tach, Sinus rhythm with PVCs, Asystole and NSR.
- An LED illuminates for: pacer pulse detection, defibrillator discharge detection, adult mode, paediatric mode and low battery. Battery saver feature powers-off simulator automatically when not in use.

Child ACLS Manikin with Interactive Arrhythmia Simulator

This full body manikin of a 5 year old child offers a wide range of ACLS training:

CPR

- Palpable and visual landmarks
- Fully articulated head, neck and jaw

Airway Management

- Realistic anatomy of the mouth, tongue, oral pharynx, larynx, epiglottis, vocal cords, trachea and oesophagus
- Separate left and right lungs for auscultation
- Suctioning capabilities
- Oral, nasal and digital intubation capabilities
- Inflatable stomach bladder to indicate oesophageal intubation

I.v. Injection (at arm)

- Realistic size of a child's veins
- Articulated at the biceps for antecubital and dorsal access
- Realistic flashback from a pressurized system

Blood Pressure Measurement

- Instructor determines systolic and diastolic levels, heart rate and sound volume
- Speaker in arm reproduces real blood pressure sounds
- 5 Korotkoff phases can be turned on and off
- Auscultatory gap can be turned on and off

Intraosseous Infusion

- Palpable landmarks include the patella, tibia and tibial tuberosity
- Pressurized system allows aspiration of fluid

Femoral Access

- Palpable arterial pulse
- Palpable symphysis pubis and anterior superior iliac spine
- Realistic flashback from a pressurized system

Defibrillation Chest

- Internal load box absorbs full strength of every shock
- Manual, semi-automatic, automatic defibrillation
- Monitor manikin like a real patient at 4 ECG sites and 2 defibrillation sites
- Compatible with all standard brands and types of defibrillators and ECG-monitors

Interactive ECG-Simulator

This external unit allows defibrillator and pacer training directly on the manikin. Training without a manikin is also possible. Various ECG rhythms can be generated and displayed on an ECG-monitor (not included) for diagnostic and defibrillation training. All arrhythmias can be displayed in adult or paediatric mode so that a total of 34 rhythms are available.

- The following 6 different arrhythmias are available for pacer training: Sinus Brady, Junctional Brady, 2nd degree type I A-V block, 2nd degree type II A-V block, 2nd degree type II A-V block with PVCs and 3rd degree A-V block.
- Cardioversion can be simulated by defibrillating the manikin with a manual, semi automatic, or automatic defibrillator. The following 11 arrhythmias are available for defibrillator training: V. Fib, V. Tach (fast), V. Tach (slow), V. Tach (polymorphic), A. Fib, A. Flutter, SVT, Sinus Tach, Sinus rhythm with PVCs, Asystole and NSR.
- An LED illuminates for: pacer pulse detection, defibrillator discharge detection, adult mode, paediatric mode and low battery. Battery saver feature powers-off simulator automatically when not in use.

Child Interactive PALS Manikin with Laptop Computer / Child 5 Years Old

Sensor equipped manikin of a 5 year old child with intubatable airway, i.v. injection arm and iv./i.o. injection leg. 15 heart rates and 9 breath sounds can be checked. Virtual instruments allow the trainee to monitor and treat the manikin (linked by an Interface). An instructor driven interactive system (CodeMaker) with teaching stations according to AHA (American Heart Association) resuscitation guidelines. Featuring colour graphics it allows the instructor to choose from 10 pre-programmed codes or to define thousands of testing experiences (may be stored, resumed or printed) such as

- Cardioversion
- Arrhythmia detection and treatment
- Assessment of vital signs using blood pressure/pulse oximeter
- Selection of medication

Sensors confirm if the following procedures have been done correctly:

- Placement of ET-tube
- Airway ventilation
- Chest compression
- Placement of i.v. needle (antecubital region, femoral vein) and i.o. needle (tibia)
- Placement of ECG leads
- Placement of blood pressure cuff and finger cuff
- Placement of defibrillator pads and external cardiac pacer

Supplied with Multimedia laptop computer and carrying bags.

MegaCode Kelly

Realistic Life Support Training Made Easy

The MegaCode Kelly VitalSim™ with the advantages of the new VitalSim™ electronics is an excellent trainer for Advanced Life Support. The following measures can be trained:

- Intubation (oral and nasal) with obstructed airways
- Oropharyngeal and nasopharyngeal airway access
- Fibroptic and lightwand intubation
- Retrograde intubation
- Needle and surgical cricothyroidotomy
- Auscultation of the stomach
- Chest decompression (midclavicular and midaxillary)
- Blood pressure measurements on movable arm
- Bilateral palpation of carotid pulse
- Peripheral IV training

Supplied with: full body model, 6 neck skins, 1 roll of cricothyroid tape, lubricant, jacket, pants, carrying case, instructions

E

Please note that VitalSim™ has to be ordered separately!

Adult

Adult ACLS Manikin with Interactive Arrhythmia Simulator

This full body manikin offers a wide range of ACLS training possibilities including arrhythmia recognition and confirmable defibrillation. The manikin is supplied with a storage case and allows training of the following ACLS procedures:

CPR

- Palpable and visual landmarks
- Fully articulated head, neck and jaw
- A printer unit allows CPR evaluation (adult/child mode, confirmation of proper hand placement, shows compression rate and depth plus ventilation duration and volume)

Airway Management

- Realistic anatomy of the mouth, tongue, oral pharynx, larynx, epiglottis, vocal cords, trachea and oesophagus
- Cricoid cartilage allows for practice of Sellick manoeuvre
- Separate left and right lungs for auscultation
- Suctioning capabilities
- Oral, nasal and digital intubation capabilities

I.v. and I.m. Injection (arm)

- Articulated at the biceps for antecubital and dorsal access
- Bony landmark at shoulder to identify muscle tissue for i.m. injections
- Realistic flashback from a pressurized system

Blood Pressure Measurement

- Instructor determines systolic and diastolic levels, heart rate and sound volume
- Speaker in arm reproduces real blood pressure sounds
- 5 Korotkoff phases can be turned on and off
- Auscultatory gap can be turned on and off

Defibrillation Chest

- Internal load box absorbs full strength of every shock
- Manual, semi-automatic, automatic defibrillation
- Monitor manikin like a real patient at 4 ECG sites and 2 defibrillation sites
- Compatible with all standard brands and types of defibrillators and ECG-monitors

Cricotracheotomy Trainer

For advanced Trauma Life Support courses.

An innovative non biological trainer is the Cricotracheotomy Trainer that simulates the laryngeal body tissue. Use of a simple disposable trachea transforms the trainer into a very effective low cost system. Up to 18 Tracheostomies or 36 Cricothyroidostomies can be performed on a single component. Palpable anatomical presence is achieved with comparatively easy identification of the cricothyroid cartilage and the thyroid cartilage. Responsive incision making. Effective alternative to use of animal tissue. Supported in a strong and immoveable base. Scalpel is not included in scope of delivery.

Intubation Trainer™

The Intubation Trainer™ is the ideal tool for physicians, paramedics, nurses, lung specialists and other medical professionals to train endotracheal intubations. The product comes with a standard USB port and is compatible with the operating systems Windows 98, 2000, ME and XP. Benefits of the Intubation Trainer™:

- See and understand the anatomy of the upper airways
- Learn the correct positioning of the tube in the trachea and correct handling of the laryngoscope
- Real-time feedback of eye-hand coordination
- Procedure recording capability improves inclusion of the whole study group during a session

The Intubation Trainer™ can be used with our following models: 9985-1005396, 9985-1005649, 9985-1005633, 9985-1005214, 9985-1005827
Supplied with: case, software, driver, instructions, camera.

9985-1005396

Endotracheal Intubation Simulator

This intubation simulator provides exceptionally good and realistic intubation training, enabling you to:

- Acquire both the skill of oral and nasal tracheal intubation
- Acquire the skill of handling supraglottic airway devices (e.g. laryngeal mask airway, oesophageal gastric tube airway)
- Confirm left and right air sound with a stethoscope
- Neck flexion and head extension
- Advancement of the mandible

Tongue, epiglottis and pharynx are reproduced realistically, with the tongue and mouth made of soft material. The front teeth (upper four) are made to break when pressure is exerted incorrectly and the teeth are used as a fulcrum while using a laryngoscope. Determining incorrect intubation is possible! When intubation and ventilation were carried out correctly, this is shown by simultaneous rising of the left and right chest. When only one lung is ventilated, the error is shown in that only one side will rise. When the tracheal tube has been mistakenly intubated into the oesophagus and air is sent, the abdomen will rise (stomach inflation), making it possible to determine the error. Parts of the model are purposefully made to be damaged if handled roughly. Accessories: 3 teeth, silicone oil, carrying case. Ventilation bag, tube, stethoscope and laryngoscope are not included in scope of delivery.

75x45x24 cm; 6.2 kg

Intubation Head

This trainer simulates a non-anaesthetized patient and features anatomical landmarks such as: teeth, tongue, oral and nasal pharynx, larynx, epiglottis, arytenoids, false cords, true vocal cords, trachea, lungs, oesophagus, cricoid cartilage and stomach. Supplied with stand, pump spray lubricant and hard carrying case.

The following airway management procedures can be trained:

- Intubation (oral, digital and nasal)
- E.T. (Endotracheal Training)
- E.O.A. (Oesophageal Oral Airway)
- P.T.L. (Pharyngeal Tracheal Lumen)
- Combitube® insertion
- Ventilation and suction techniques
- Proper cuff inflation
- Sellick manoeuvre (applying cricoid pressure changes the position of the trachea and closes the oesophagus)

Airway Management Trainer

Realistic practice is the key to developing proficiency in airway management skills. The Airway Management Trainer's lifelike upper torso and head simulates real world complications when practising a variety of intubation, ventilation and suction techniques.

- Realistic anatomical features allow demonstration of Sellick Manoeuvre and laryngospasm
- Practical training in clearing an obstructed airway and suctioning of liquid foreign matter
- Provides visual inspection of lung expansion and auscultation of breath sounds
- Simulates stomach inflation and vomiting situation
- Airway demonstration model is standard with each trainer
- Can be used with trachlight products
- Improved airway allows insertion of laryngeal mask airway and combi-tube

Includes: Manikin on sturdy board, airway demonstration model, cleaning kit, lubricant, carry case, and directions for use.

Intubation Torso

This upper torso features:

- Realistic chest cavity with trachea, bronchi and lungs, heart and stomach
- Nominal 18 mm airway
- Anatomically accurate mouth, tongue, airway and oesophagus
- Fully articulating head, neck and jaw
- Wide, straight, stiffer epiglottis and realistic vocal cords
- Soft neck with cricocartilage

The following airway management procedures can be performed:

- Head tilt/chin lift, jaw thrust and neck extension into the sniffing position
- Placement of cuffed ET tubes and EOA (Oesophagus Obturator Airway)
- Intubation (oral, digital, nasal)
- Sellick manoeuvre
- Observation of unilateral or bilateral lung expansion under positive pressure ventilation
- Surgical placement of tracheotomy tube
- Emergency needle cricothyrotomy stick
- Bilateral tension pneumothorax decompression

Supplied with 6 neck collars, 3 cricocartilages, membrane tape and carrying bag. Laryngoscope and tube are not included in scope of delivery. 76x56x30.5 cm; 11.4 kg

E

9985-1005827

Pneumothorax Training Manikin

Recommended by EMT (Emergency Medical Training) instructors, this model permits instruction of the delicate procedure for successfully managing chest wounds in which a collapsed lung interferes with the victim's respiration and blood flow. The model accepts needle and thoracotomy in the second intercostal space, in the mid-clavicular line, the fifth intercostal space in the mid-axillary line. A realistic training aid to practice proper needle insertion which enables built-up air pressure to escape the thorax. Delivered with foot pump, replacement pleural cavity and carrying bag, without procedural needle.

Economy Adult Airway Management Trainer

This detailed adult intubation head comes mounted for clinical teaching and practice of advanced airway management. Intubation procedures and skills, including anatomy knowledge and recognition, endotracheal intubation, nasotracheal intubation, use of field emergency airway adjunct tubes like LMAs and Combitube, securing, and suctioning, and maintenance of the installation can all be practiced with this unit. A soft carry bag, lubricant, and instructions for use are included. Without tube.

53x23x25 cm; 4.5 kg

E

9985-1005780

Adult Airway Management Trainer

Detailed anatomy featured on the adult intubation trainer stands out. Get a clear picture of human anatomy from the sculpted alveolar sac, bronchial tree, and blood vessel structures of the cross sectioned and exposed flexible lungs, to the interior main bronchus and oral/nasal pharyngeal spaces. Combine these details with an airway complicated by breakout teeth, tongue oedema, and laryngo-spasm, and this airway trainer rates hard. An anatomical stomach that swells with oesophageal intubation, or excessive pressure with the BVM during rescue breathing, together with the vomiting capability of this manikin makes this an exceptional educational tool for multitasking. Includes instructions for use, soft carry bag, lubricant, and replaceable lungs and stomach.

84x64x30 cm; 20 kg

Water Rescue Manikin

This manikin allow Coast Guards, Lifeguard Trainers and Emergency Personnel to train water rescue and retrieval. When filled with water the manikins will sink to the bottom.

CPR Water Rescue Manikin (adult), 165 cm

This manikin of an adult allows Coast Guards, Lifeguard Trainers and Emergency Personnel to teach water rescue and retrieval as well as CPR. The manikin has articulated joints and is made of durable plastic and rust resistant steel. When filled with water the manikin will submerge to the neck, if an additional 5 kg (a brick will do) is added, it will sink completely.

Rescue Manikins

Rescue Manikins

These manikins allow training in the extrication of a person from a pole top situation, confined spaces, collapsed buildings, smoky rooms and also ladder carry-down protocols. A perfect aid in situations too hazardous or uncomfortable for human volunteers and especially suitable for Military, Fire Departments, Police Departments, Safety Teams and Emergency Personnel. The manikins feature articulated joints and realistic weight distribution. They are made of durable plastic with strong plastic-coated cables. These manikins are not fire resistant and are not for water rescue.

Recovery & Accident Simulation

9985-1005708

Casualty Simulation Kit I

The most economical way to get started in simulated injuries. Reusable wounds and refillable accessories let you practice bandaging and splinting techniques repeatedly. The kit is supplied in a storage case and includes:

Bleeding wound (complete with reservoir bags with pump assembly):

- 1 compound fracture tibia

Non bleeding wounds:

- 12 assorted stick-on lacerations and open fracture wounds

Make-up Accessories:

1 atomizer mist sprayer; 1 bottle coagulant make-up blood; 1 pkg. blood powder for 4.5 litre simulated blood; 1 casualty simulation wax; 1 pkg. broken Plexiglas® for simulating glass imbedded wound; 4 grease paint colours: white, blue, brown and red; 1 pkg. methyl cellulose for blood thickening; 1 body adhesive for stick-on wounds; 3 spatulas; 3 tongue depressors
33x25.5x13 cm; 2.3 kg

E

9985-1005708

Casualty Simulation Kit III

This kit is especially suitable for use in the creation of a disaster scenario where application of make-up on multiple casualties creates the widest range of wounds. This kit contains specialty wounds associated with gunshots, like perforations, major avulsions and complex jaw wounds and also a large supply of makeup components. The kit is supplied in a storage case and includes:

Bleeding wounds (complete with reservoir bags with pump assembly):

- 2 compound fractures of humerus
- 2 compound fractures of tibia

Non bleeding wounds:

- 60 assorted stick-on lacerations and open fracture wounds

Make-up Accessories:

1 make-up palette; 1 scissors; 1 mirror; 1 measuring cup; 2 atomizer mist sprayer; 2 casualty simulation wax; 2 bottles coagulant make-up blood; 3 pkg. blood powder, each for 4.5 litre simulated blood; 2 pkg. broken Plexiglas® for simulating glass imbedded wound; 2 fake dirt; 2 each make-up Liners: red, blue, brown, white, yellow, black and flesh; 2 plasticine modelling paste: white and dark; 1 glycerine for simulating perspiration; 1 cold cream; 1 mineral oil; 1 charcoal; 3 latex compound to simulate scars; 2 petroleum jelly; 2 pressure sensitive tape; 1 pkg. methyl cellulose for blood thickening; 2 body adhesive for stick-on wounds; 6 spatulas; 10 tongue depressors; 10 cotton balls; 10 cotton applicators/swab sticks; 1 pkg. of tissues; 6 make-up sponges.

Casualty Simulation Kit II

This kit gives you more complex wounds for testing higher levels of skill in bandaging and patient care while keeping initial expenditures low. The kit is supplied in a storage case and includes:

Bleeding wounds (complete with reservoir bags with pump assembly):

- 1 open amputation
- 1 compound fracture of humerus
- 1 compound fracture of tibia
- 1 sucking wound of chest
- 1 gunshot wound of palm

Non-bleeding wounds:

- 24 assorted stick-on lacerations and open fracture wounds

Make-up Accessories:

1 bottle coagulant make-up blood; 1 pkg. methyl cellulose for blood thickening; 3 pkg. blood powder, each for 4.5 litre simulated blood; 1 body adhesive for stick-on wounds; 1 casualty simulation wax; 1 pkg. broken Plexiglas® for simulating glass imbedded wound; 4 grease paint colours: white, blue, brown and red; 4 reservoir bags with pump assembly; 1 atomizer mist sprayer; 3 spatulas; 3 tongue depressors

Casualty Simulation Kit IV

This complex EMT (Emergency Medical Training) kit uses components applied to human and manikin patients to get the widest variety of training situations possible. Wounds strapped on, stuck on, created from wax and made to bleed challenge both the volunteer and the professional in areas of burns, lacerations, fractures of arms and legs and amputations; a good kit to simulate community disasters like bus accidents, or building explosions. The kit is supplied in a storage case and includes:

Bleeding wounds (complete with reservoir bags with pump assembly):

- 1 jaw wound
- 1 abdominal wound with protruding intestines
- 1 sucking wound of chest
- 2 compound fractures of humerus
- 2 compound fractures of femur
- 2 compound fractures of tibia
- 1 laceration of the forehead
- 1 open amputation
- 2 gunshot wound of palm

Non-bleeding wounds:

- 36 assorted stick-on lacerations and open fracture wounds
- 1 phosphorous burn of the hand
- 1 face in shock
- 2nd & 3rd degree burn of the face
- 2nd & 3rd degree burn of the chest
- 2nd & 3rd degree burn of the back
- 2nd & 3rd degree burn of the hand
- 2nd & 3rd degree burn of the forearm

Make-up Accessories:

1 mirror; 1 body adhesive for stick-on wounds; 2 casualty simulation wax; 3 bottles coagulant make-up blood; 5 pkg. blood powder, each for 4.5 litre simulated blood; 1 pkg. methyl cellulose for blood thickening; 4 grease paint colours: white, blue, brown and red; 2 pkg. broken Plexiglas® for simulating glass imbedded wound; 1 cold cream; 2 atomizer mist sprayer; 2 plasticine modelling paste: white and dark; 6 tongue depressors; 1 pkg. of tissues; 2 fake dirt; 1 charcoal; 1 petroleum jelly; 2 spatulas 61x23x46 cm; 14.6 kg

9985-1005772

Forensic Science Wound Simulation Kit

This basic wound identification set was developed with the help of forensic experts and contains a number of injuries developed specifically for students to acquire proficiency in crime scene analysis and crime scene reconstruction. The details in the wounds are designed to determine type of weapon, direction of force, and other related details that only come with realistic trauma reproduction. This innovative kit contains carefully sculpted models of injuries taken from actual victim's wounds and reviewed by forensic education professionals ensuring real scene representations of trauma commonly found on violent crime victims.

This kit is a must for any applied program of wound study. Materials in this kit will provide first time exposure for the novice as well as continued training for the professional already in the field. From simple puncture wounds associated with sharp instrument trauma to firearms entry and exit wounds, this kit is critical in studying the methodology of crime scene reconstruction based on wound demographics. Can you recognize pattern ligature in strangulation? What was the murder weapon? What does a single bladed knife stab wound look like compared to a double edge wound? What are the difference between the wound of mechanism for suicide and hesitation marks? Each of these questions and more are addressed with a kit that also includes moulage wax, coagulant blood, and a selection of make-up for bruising, blanching and lividity. The entire case is packed in a sturdy carrying case for protection and ease of transportation to the training site. 24 different wounds in the kit; 72 pieces in all.

Wounds Included:

Petechiae; ecchymosis; pattern ligature; slash; shotgun close range; shotgun; intermediate range; intermediate range round; intermediate range flake; exit gunshot; contact gunshot contact handgun; contact wound; screwdriver; bite partial; bite complete; hesitation; single edge knife; double-edge knife; blunt bat; bunny ears exit wound; exit wound ice pick; compound fracture humerus; foreign body protrusion; large laceration; medium laceration large compound fracture; 2nd degree burn. 53x33x38 cm; 6 kg

3B Acupuncture Model, Male

This new acupuncture model sets the standard in didactics and aesthetics and has been developed in cooperation with experienced European acupuncture specialists. It is about 70 cm tall and contains 396 acupuncture points. All conduction paths are coloured according to the 5 phases. We have intentionally dispensed with Chinese labelling on the model. This makes the accurate identification of acupuncture points significantly easier. True to the motto: less is sometimes more.

NEW

3B LASER NEEDLE The New Dimension

The new 3B LASER NEEDLE is one of the most attractive innovations in the field of low-level laser therapy. It impressively demonstrates that modern technology and attentive care for the patient are not mutually exclusive.

More information: www.3b-akupunktur.de

All the advantages at a glance:

LASER NEEDLE unit with 12 laser diodes

- Mobile Touch Screen (Control Touch Pad)
- Self explanatory and logical operation
- Low space requirements and high level of mobility
- Perfect Ergonomics
- Reliable and sophisticated technology
- Painless and side effect free treatment
- Broad therapy spectrum
- High patient acceptance
- Low capital expenditure
- Amortisation after only a few treatments
- Comprehensive, fast service
- Made in Germany: guaranteed highest product quality and safety

9985-1004916

» Traditional Chinese medicine is being continuously advanced by such outstanding innovations and contributes increasingly to public health.

*Dr. Michael Weber, Germany,
President of the European TCM Laser Academy*

3B Scientific History

The international 3B Scientific group of companies is the world's largest and most experienced manufacturer of anatomical teaching aids. The oldest production site was set up as early as 1819 in Budapest, Hungary. The continuously growing success of 3B Scientific is the result of global expansion, based on the production and sales of high-quality medical and scientific teaching aids available at fair prices. The internationally registered brand name 3B Scientific® can be found around the world in the fields of natural sciences, medical training and patient education. The product range includes products for lectures in physics and biology as well as anatomical models, software and charts, medical simulators, acupuncture and other therapy products. The company has been awarded the DIN EN ISO 9001:2008 certification for the excellent quality of its services, products and organizational structures. This official step towards quality management emphasizes the continuing process of innovation, product improvement and customer orientation that is associated with the brand name 3B Scientific®.

3B stands for: *Best Quality Best Value Best Service*

- 1819 Calderoni founded in Budapest, Hungary
- 1912 Training Workshops of the German Hygiene Museum founded in Dresden
- 1948 Paul Binhold Lehrmittelfabrik founded in Hamburg
- 1950 Production of the first plastic skeleton
- 1952 First skeleton manufacturing plant opened
- 1963 New headquarters at Rudorffweg, Hamburg
- 1965 Introduction of the Torso product line
- 1970 Introduction of the Binhold company logo
- 1979 Anatomical models first exported to the USA
- 1983 First manufacturing of injection moulded skeleton parts
- 1986 Care simulators added to the product range
- 1988 Anatomical models first exported to Japan
- 1991 DHM Lehrmittelfabrik GmbH founded in Dresden
- 1993 Acquisition of Calderoni and foundation of Biocalderoni in Hungary
- 1995 American 3B Scientific founded in Atlanta, USA
- 1996 New logo for the 3B Scientific Group
- 1997 Nihon 3B Scientific founded in Niigata, Japan
- 1998 France 3B Scientific founded in Bartenheim, France
- 1998 Merger of Paul Binhold Lehrmittelfabrik GmbH and DHM Lehrmittelfabrik to form 3B Scientific GmbH
- 1999 China 3B Scientific founded in Suzhou, China
- 2000 DIN EN ISO 9001 certification
- 2001 Introduction of the full 3B Scientific® product range for physics
- 2002 Italy 3B Scientific founded in Bologna, Italy
- 2003 España 3B Scientific founded in Valencia, Spain
- 2003 UK 3B Scientific founded in Weston-super-Mare, United Kingdom
- 2004 All-European distributor of SEIRIN® acupuncture needles
- 2004 Acquisition of ELWE Didactic GmbH in Klingenthal
- 2005 Acquisition of TELTRON® brand name and production
- 2005 Russia 3B Scientific founded in St. Petersburg.
- 2006 Brasil 3B Scientific founded in Joinville, Brasil.
- 2007 Thai 3B Scientific Co Ltd., founded in Bangkok, Thailand
- 2009 DIN EN ISO 9001:2008 certification
